## INTEGRATED ECOSYSTEM

Rodin is more than a resin line—it is a fully integrated digital materials ecosystem engineered to deliver predictable performance, workflow consistency, and long-term reliability across printing, curing, finishing, and bonding workflows.

## CLINICAL APPLICATIONS

Permanent and provisional crowns and bridges, inlays and onlays, veneers, denture bases and teeth, partial denture frameworks, digital dentures, precision models, surgical guides, and full-arch All-on-X provisional restorations.

# Innovative Dental Solutions

## 2026/2027 PRODUCT CATALOG

Our journey at Pac-Dent, Inc. began with a profound passion for excellence. Since 1992, this unwavering passion has driven our team, guiding us towards constant improvements and innovations that have defined our path.

Throughout this journey, our strong belief in the transformative power of innovation has been a guiding light. Our innovative approach, coupled with a fervent passion for continuous improvement in preventive dentistry - particularly in the disposable prophylaxis angle sector - has solidified our status as industry pioneers. Key milestones such as the strategic acquisition of Gingi-Pak, Inc. in 2016 and the pioneering launch of Rodin 3D materials in 2019, mark our continuous evolution and steadfast commitment to advancing dental technology. These initiatives have not only expanded our capabilities but also reinforced our position in the industry.

Our commitment to innovation transcends conventional boundaries. In the realm of 3D nanohybrid resin materials, our flagship products like Rodin Titan and Rodin Sculpture 2.0 stand as a testament to our achievements. These products, leading in innovation, quality, and functionality, underscore our significant role in the digital revolution of dentistry. Our foray into AI technologies and the development of advanced restorative materials, such as Rodin Bond and Rodin Luting Cement Universal, further emphasize our role as trailblazers in dental solutions.

At Pac-Dent, our philosophy is built on two fundamental beliefs. First, innovation is the lifeblood of every aspect of our business—from sales and marketing to research, development, production, logistics, and customer service. Second, we consistently embrace a scientific research mindset, ensuring that our practices are as groundbreaking as our products, effectively merging business acumen with rigorous R&D.

Our ambition goes beyond the confines of our company's success; it is about making a meaningful contribution to the progress of the dental industry. By offering high-quality products at competitive prices, we are dedicated to serving the global dental community, erasing boundaries in our endeavor to push forward dental technologies.

Our mission at Pac-Dent is not just to contribute, but also to transform. We are committed to shaping a future where excellence in dental materials and devices isn't just an aspiration but a global standard—advanced, efficient, and accessible to all.

Description	Reinforced beveled gears ensure only one angle is required for each procedure	<ul style="list-style-type: none"> <li>Features the same mechanical design and technology of ProAngle Plus but with flat or tapered brush cups</li> <li>Great for orthodontic stain removal</li> </ul>	<ul style="list-style-type: none"> <li>Features a 20% slimmer body than traditional angles, making it an ideal choice for younger patients.</li> <li>Low profile</li> </ul>	Reduces the weight of the handpiece and eliminates the costs of cleaning and disinfection for the nose cone	Advanced gear design ensures each prophy procedure only requires one angle to finish

**AntiSplatr® FLEX Slim** NEW!  
*Disposable Propy Angle*

- Ideal contour adaptation and interproximal cleaning
- Flex cup minimizes cup slipping during procedures
- 42% smaller body and neck design for enhanced access and visibility
- Splatter fender minimizes the accumulation of paste and bodily fluids
- Ergo configuration reduces micro-traumas

**Flex Cup**  
Minimizes cup slipping and paste splatter

**Splatter Fender**  
Effectively removes accumulated paste and bodily fluids

**Optimal Cup**  
Allows greater flare & subgingival access

**Spiral Blades**  
Allow for optimum paste retention

**42% Slimmer Head**  
Provides better visibility and access

The AntiSplatr Flex Slim and Flex Ergo Slim prophy angles enhance the polishing experience with several key improvements. The flex cup effortlessly adapts to the contours of any tooth, reducing excessive wrist movement and improving overall comfort. This design minimizes slipping during procedures while optimizing paste spread and retention. Additionally, an upgraded cup lip and flare provide superior access to subgingival areas, and external ridges enhance interproximal polishing for a more efficient and comfortable experience. The prophy angles feature a 42% smaller body for improved access and visibility.

Each angle includes Pac-Dent's renowned AntiSplatr fender, which effectively prevents saliva, blood, and prophy paste from accumulating on the cup's exterior. The fender's compact design and strategic positioning ensure optimal reach and visibility. The Ergo configuration further reduces micro-traumas during use. Does not contain natural latex rubber.

 AS RATED BY A NON-PROFIT DENTAL  
 RESEARCH ORGANIZATION

**AntiSplatr®**  
 Disposable Propy Angle

- Splatter fender removes accumulated paste and bodily fluids
- Helps protect against the risk of cross-contamination
- Spiral blades allow for optimum paste retention
- Optimal cup lip and flare allows for greater subgingival access
- Reinforces existing infection control protocols

**Compact Splatter Fender**  
Effectively removes accumulated paste and bodily fluids

**Optimal Cup Lip**  
Allows greater flare & subgingival access

**Spiral Blades**  
For optimal paste retention

**Reinforced Gear**  
Ensures efficient polishing

The improved AntiSplatr Disposable Propy Angle\* represents an important advancement in disposable prophy angles. This innovative anti-splatter angle features cutting-edge technology aimed at enhancing the safety and efficiency of dental professionals. It reinforces your existing infection control protocols by actively mitigating the risk of cross-contamination from splatters.

The ingeniously designed splatter fender effectively eliminates saliva, blood, and prophy paste accumulation from the cup's exterior. The splatter fender's compact design and positioning ensure optimal reach and better visibility. Complemented by counter-clockwise spiral blades, the latex-free prophy cup excels in retaining paste for optimal polishing performance.

## Oscillating AntiSplatr Mini™

Oscillating Disposable Mini Propy Angle

- Oscillating spin reduces splatter
- Lowered heat generation allows for increased contact
- Ultra-compact design improves visibility and reach
- Unique cup design provides optimal flare around tooth contours
- Quieter and smoother than traditional unidirectional disposable prophy angles

Oscillating Technology

Rotating Motion

20% Slimmer DPA Body

The all-new Oscillating AntiSplatr Mini Disposable Propy Angle is an ultra-compact disposable prophy angle that ditches the traditional unidirectional rotation for an oscillating spinning motion.

This new reciprocating spin mechanism significantly reduces the splatter of prophy paste, saliva, and other body fluids while simultaneously decreasing the amount of frictional heat generated to allow for longer tooth contact. This innovative gear is enclosed in a slim body to maximize both visibility and reach.

## MINI90 & MINI ERGO

### Mini Disposable Propy Angle

- Smooth-running, quiet beveled gear design
- This smaller, powerful head allows for increased visibility and improved access
- Improved flare for expanded subgingival access
- Ergonomic design reduces hand and arm micro-traumas
- Latex-free cups

The Mini 90 & Mini Ergo disposable propy angles are the smallest and most compact angles on the market. With a smaller head and the slimmest profile, these disposable propy angles not only provide increased visibility with less vibration, but also better access to posterior areas.

Mini 90 features a 90-degree compact head, a shorter neck, and the slimmest profile on the market for expanded visibility, improved reach, and greater maneuverability. Available in both sterile and non-sterile versions. Mini Ergo is ergonomically designed with the optimal amount of head tilt to reduce hand and wrist fatigue.

### Mini DPA VS. Standard DPA

## FUNimal Pedo™

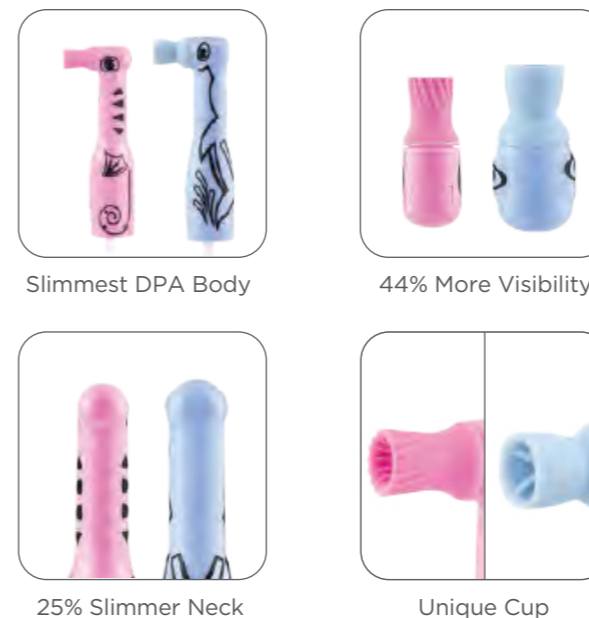

### FUNimal Pedo™ Pediatric Mini Propy Angle

- Slim neck and smaller cup design
- Latex-free cups pedo or regular soft cup
- FUNimal friends reduce young patient anxiety
- Increased visibility and access during procedures

Built on the critically acclaimed Mini 90, the FUNimal Pedo is an ultra-compact disposable propy angle designed with a compact head, shorter neck, and a slimmer profile that makes polishing procedures for young patients with smaller teeth easier and more engaging than ever. The compact design paired with the smaller pedo cups allows for greater visibility and access during procedures, while reducing young patients' anxiety.

**NEW**  
**ProPaste™ One**  
Disposable Propy Ring and **AntiSplatr™** Paste Combo

**FITS ANY FINGER**

The ProPaste One is a 2 in 1, unique and economical, pre-assembled disposable prophy ring and powerful paste combo for more efficient polishing, that bolsters infection control protocols. This pre-assembled combo eliminates the need to autoclave or sanitize a prophy ring for the next patient, simply use and dispose.

Each ring has an ideal amount of desensitizing and anti-splatter prophy paste for each procedure. Ideal solution for all hygienists and is an asset for mobile hygienists. Each box contains 144 ring and paste combos.

### ProPaste One™ Disposable Propy Ring and AntiSplatr™ Paste Combo

- Promotes dentin remineralization, aiding in oral health maintenance
- Desensitizing, easy to rinse-off, anti-splatter paste with 1.23% fluoride ion and Tri-Calcium Phosphate (TCP), that provides exceptional polishing and stain-removal
- Innovative single-use system reduces need for autoclaving and sanitization
- Helps reduce cross-contamination and infections
- Ergonomic ring design provides tight prophy cup fit and comfortable finger grip
- Gluten-free

**ProMin™ and ProMin™ F**  
Tooth Desensitizing Paste with CPIC

NEW!

- **Rebuilds Beyond the Surface:** Bioactive CPIC supports remineralization of enamel, dentin subsurfaces and tubules—not just the surface
- **Deep Nano-Cluster Penetration:** CPIC's nano-cluster size enables deep penetration and support of the enamel substructure
- **Long-Lasting Sensitivity Relief:** CPIC supports dentinal tubule remineralization for sensitivity relief
- **Suitable for Patients with Reduced Salivary Flow:** ProMin F provides calcium, phosphate, and fluoride to help support enamel mineral balance
- **Clean, Patient-Friendly Formula:** Suitable for both children and adults. Free of milk proteins, gluten, peanuts, sodium lauryl sulfate, and triclosan

ProMin F is a bioactive remineralizing paste that delivers Calcium Phosphate Ion Clusters (CPICs) containing calcium, phosphate, and fluoride to the teeth. It is designed to support enamel and dentin subsurface remineralization and to help reduce tooth sensitivity.

ProMin F is suitable for a wide range of patients, including children and adults, and is especially beneficial for individuals with dry mouth, orthodontic appliances, enamel wear, or tooth sensitivity. It is free of milk proteins, gluten, peanuts, sodium lauryl sulfate, and triclosan, making it appropriate for patients with dietary restrictions or ingredient sensitivities. ProMin F is also available in a travel-friendly pen format for targeted application.

ProMin is a fluoride-free CPIC paste. It is ideal for patients who prefer non-fluoride care while still benefiting from CPIC-driven remineralization.

**How to Use**

The paste can be easily applied using a toothbrush, fingertip, or custom dental tray, making it convenient for both professional and home use. Regular application can enhance and maintain enamel strength and health.

Tooth Tray

Toothbrush

Finger

**What is the CPIC technology?**

CPICs (calcium phosphate ion clusters) are nano-sized, bioactive mineral clusters that can diffuse into the microscopic pores and defects of demineralized enamel and exposed dentin. By reaching below the surface, CPICs help support enamel substructure and dentinal tubules mineral balance, supporting remineralization of enamel, dentin subsurfaces, and tubules—not just the surface.

CPIC technology is engineered to work with the tooth's natural mineralization processes. As CPICs break down, they release calcium and phosphate ions that support hydroxyapatite, supporting mineral density within enamel and helping maintain long-lasting dentinal tubule occlusion for sensitivity relief.

**Figure 1:** Shows effective enamel mineralization after 14 treatments of CPIC paste.\*

**Figure 2:** Within 48 hours, the intricate structure of enamel was precisely replicated using CPIC material, confirmed by SEM as the enamel regenerated by CPICs was indistinguishable from native enamel.\*

**Figure 3:** Shows effective dentin mineralization after 14 treatments of CPIC Paste.\*

**Figure 4:** The cross-section of the mineralized layer reveals distinct growth lines, indicating that a mineral layer forms with each CPIC treatment, growing approximately 0.6 μm in thickness every 3 hours.\*

# PROMATE™ Contra

Ergonomic Hygiene Handpiece **NEW!**

Compared to Young® Hygiene Handpiece

- **Contra-Angle Hose Connection:** Helps minimize hand and wrist fatigue
- **360° Rotating Nosecone:** Allows for more natural hand movement during
- **Contoured Shape:** Fits naturally in the hand, offering superior comfort and non-slip control
- **2-Year Warranty**

Its lightweight construction reduces vibration and chatter, helping to minimize hand and wrist fatigue for enhanced clinician comfort throughout the day.

251201 ProMate Contra Hygiene Handpiece

The ProMate Contra Hygiene Handpiece is engineered with a contoured, ergonomic design that fits naturally in the hand, delivering exceptional comfort and secure, non-slip control during procedures. Featuring a 360° rotating nosecone and a contra-angle hose connection, it enables smoother, more natural hand movement during polishing.

## PROMATE™ EZ-Q

Quick Disconnect Hygiene Handpiece

NEW!

The ProMate EZ-Q boasts impressive speeds of up to 3K RPM and is equipped with a unique swivel head that provides unparalleled maneuverability. This exceptional design provides hygienists with a complete 360-degree range of motion. Enhanced by a universal prophy angle connection and a lube-free motor, the ProMate EZ-Q stands out as the optimal choice for improving the efficiency of your practice.

- Quick Disconnect Functionality: Significant improvement in preparation time between patients
- Maneuverability: Full Range of Motion with 360° Swivel Head
- Compatibility: Universal connector provides compatibility with most disposable prophy angle brands
- Low-Maintenance: Lube Free Motor reduces need for constant maintenance
- Autoclavable: Autoclavable Stainless Steel exterior simplifies sterilization process
- 2-Year Warranty

Upgrade your hygiene department with the ProMate EZ-Q, Pac-Dent's latest low-speed hygiene handpiece that was developed to optimize the hygienist workflow by improving procedure efficiency and reducing the need for constant maintenance.

Designed with the utmost precision, the ProMate EZ-Q introduces a quick disconnect mechanism that facilitates a seamless transition between patients, reducing preparation time between hygiene procedures.

**PA-EZ-CB** ProMate EZ-Q Quick Disconnect Combo  
1 x Hygiene Handpiece  
1 x Quick Disconnect Coupler

**PA-EZ3H** ProMate EZ-Q Quick Disconnect Hygiene Handpiece

**PA-EZ-C** ProMate EZ-Q Quick Disconnect Coupler

## ProMate™ LF

Lube Free Hygiene Prophy Handpiece

- Lube free motor requiring little maintenance
- Compatible with nearly all disposable prophy angles
- Extremely quiet, minimizing patient anxiety
- 360° swivel
- Lightweight 2.79 oz
- 5K Rpm
- 2-Year Warranty

**360° SWIVEL**  
Features 360° swivel capabilities that provide smooth maneuverability with exceptional control

**FRICITION GRIP CHUCK**  
Easy friction grip chucking system. Just push into place and pull to remove

**POWERFUL**  
Delivers constant torque for all prophy applications at a max speed of 5000 RPM

**PA-DM5H** ProMate CL Lube-Free Hygiene Prophy Handpiece

## ProMate™

Hygiene Prophy Handpiece

- Ergonomic lightweight design for superior comfort
- Swivel back end connection for less drag and arm fatigue
- Soft non-slip grips increase tactile sensitivity and reduce daily hand stress
- Works with all standard disposable prophy angles
- Fully autoclavable
- 5K Rpm
- 2-Year Warranty

Reduce fatigue and daily stress on hand and arm muscles with our ProMate hygiene handpiece. The lightweight ergonomic design minimizes vibration and chatter. The textured silicone grip and contoured shape provide superior comfort and non-slip control.

Easily maintained by autoclaving the entire handpiece with the grip, or replace the grip for color coding and personalization. Grip colors are available in blue, green, lavender, and rose.

# AUTOSCALER®

**South East Instruments**  
A Pac-Dent Company

Best-in-class warranty with 6 years for circuit boards and 2 years for all other parts!

## Ultrasonic Scaler

- Best-in-class warranty with 6 years for circuit boards, and 2 years on all other components
- Made for special periodontal and any supra-subgingival or routine scaling
- Linear power control allows exact power level needed for each procedure
- Automatic tuning circuit provides even power under all load conditions
- Compatible with most industry-leading magnetostrictive tips
- Tabletop models include hardwired handpiece assembly
- 25K and 30K models available in tabletop or built-in retrofit models

The Autoscaler has been manufactured in the USA for over 40 years with the highest quality of materials available. The Autoscaler continues to be reliable and high quality scaler.

- AW25C** AutoScaler 25K Ultrasonic Scaler, 120V (Device Only)
- AW30C** Autoscaler 30k Ultrasonic Scaler, 120V (Device Only)

- AW25BI** Autoscaler 25k Ultrasonic Scaler, Built-In Model 120V (Device Only)
- AW30BI** Autoscaler 30k Ultrasonic Scaler Built-In Model 120V (Device Only)

## Ultrasonic Insert Tips

- Non-slip grip for greater tactile sensitivity
- The inserts use a base flow water delivery
- Compatible with most magnetostrictive handpieces
- 90 Day Warranty against defects arising from faulty material or workmanship

Before After

## Perio Armor® 1.7% HP Oral Cleansing Gel

NEW!

- Features 1.7% Hydrogen Peroxide Formula that effectively breaks down and kills bacteria to help protect against gum disease
- Cleans periodontal pocket to allow for better tissue and sore recovery
- Non-invasive periodontal tray solution that easily enters the sulcus, goes where flossing and brushing can't
- Promotes gentle tooth whitening and a fresh breath after each use
- Unique flavors including Strawberry, Bubblegum, and Mint
- Gluten-free

Gingi-Pak's Perio Armor 1.7% hydrogen peroxide (HP) gel is a non-invasive periodontal tray therapy solution. Perio Armor with HP helps eliminate infection causing bacteria and intra-oral wounds commonly associated with periodontitis and gingivitis.

Perio Armor's concentration of HP also promotes gentle tooth whitening. Available in 6 tubes per pack.

Flavor	6/pk
Mint	93101
Strawberry	93102
Bubblegum	93103

## Simple and Easy to Use in 3 Steps with Dental Trays

While easier to use with trays, direct application to the gum line works well!

Apply a single ribbon of gel on the dental tray from one end to the other.

Insert the tray onto the teeth and leave it for 15 minutes.

Remove the tray and brush the teeth with a toothbrush, and thoroughly rinse with water.

**SDF Pro™**  
38% Silver Diamine Fluoride **NEW!**

Compared to Advantage Arrest® Silver Diamine Fluoride

- Reduces dentinal hypersensitivity and kills microorganisms
- Enhances acid and abrasion resistance of compromised dentin
- Non-invasive—no drills, needles, or anesthetics needed
- Ideal when traditional treatments like fillings or sealants aren't an option

Gingi-Pak's SDF Pro 38% Silver Diamine Fluoride solution is formulated to reduce dentinal hypersensitivity and provide primary prevention on high-risk sites. It penetrates healthy dentin and enamel without causing discoloration, delivering long-lasting antimicrobial protection while improving acid and abrasion resistance of compromised dentin.

Ideal for challenging situations where traditional restorative treatments like fillings or sealants are not possible, or in identifying hidden lesions, SDF Pro 38% offers a non-invasive alternative that avoids the need for drills, needles, or anesthetic, creating a more comfortable patient experience.

**How to Apply**

Remove excess saliva and isolate the area with cotton or gauze. Apply petroleum jelly if near the gingiva.

Thoroughly dry the affected tooth surface(s).

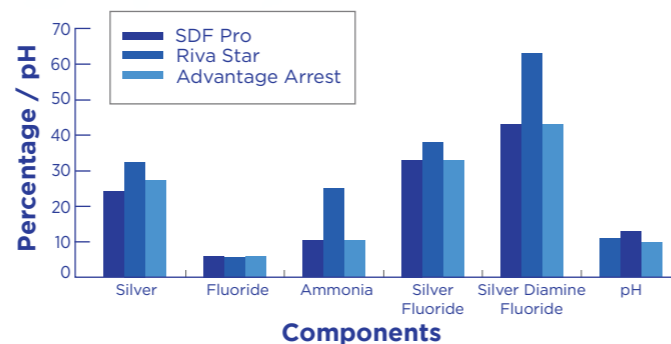

Dispense 1 drop of SDF Pro into a dappen dish and apply with an applicator.

Allow SDF Pro to absorb for up to one minute. Air dry to remove any excess saliva and precipitation.

**Comparison of SDF Products by Components**

- SDF Pro's moderate pH indicates increased stability and patient comfort
- SDF Pro's lower ammonia level indicates reduced odor and increased comfort

**GINGICaine® in Syringe**  
20% Benzocaine Oral Anesthetic

- 20% Benzocaine formula
- Needleless pain-free delivery
- Stays in where placed and without numbing unwanted regions
- Quick 15-20 second onset and lasts up to 30 minutes of anesthesia
- Flows smoothly with no gritty feel
- Available in Strawberry flavor

Gingi-Pak introduces GINGICaine Oral Anesthetic Gel in Syringe form. The 20% Benzocaine formula has a fast 15-second onset for safe and effective pain relief. The syringe kit is economical and contains 20 syringes per package. The gel has a great strawberry flavor preferred by the patients that doesn't leave a medicinal aftertaste.

**Perfect Control for Local Anesthetics**

Each syringe of GINGICaine in Syringe contains 1.2 mL of gel that allows the clinician to deliver gel directly into the sulcus to induce anesthesia right where it is needed every time and without the need to numb the patient's whole mouth.

7mm gauge mark

Its unique micro needle tip features a rounded end to eliminate sulcus poking or tearing during delivery and a 7 mm gauge mark when directly applied within the periodontal pocket. GINGICaine in syringe is ideal for a variety of procedures including but not limited to injections, root planning, subgingival scaling, and gingival retractions.

**Rodin® Luting Cement** NEW!  
Resin-Modified Glass Ionomer Cement

- **Reinforced Strength & Minimal Shrinkage:** Proprietary chemical formulation fortifies the cement matrix, ensuring exceptional bond durability across a wide range of substrates—including printed ceramic resins, lithium disilicate, zirconia, dental alloys, and titanium.
- **Superior Protection Against Microbial Challenges:** Reduced shrinkage minimizes marginal gaps, preventing microbial colonization and preserving long-term restoration integrity.
- **Enhanced Bond Strength & Unmatched Reliability:** Designed for predictable and long-lasting adhesion and ensures a rock-solid bond on naturally prepared abutments and implant systems—even in the most demanding clinical conditions.
- **Optimized Aesthetics for Seamless Integration:** With exceptional radiopacity and natural translucency, Rodin Luting Cement is an ideal choice for esthetic restorations. Available in four shades, it seamlessly blends with stump colors while effectively concealing dark preparations or metal abutments.

**Comparison of Bond Strength for Different Materials and Cements\***

**Best in Class Bond Strength on:**

Inlay/Onlay

Developed to tackle the demanding bonding and luting challenges of 3D-printed resin ceramic restorations, Rodin Luting Cement is the most advanced resin-modified glass ionomer cement designed for modern restorative dentistry. It seamlessly blends industry-leading adhesion, versatility, and esthetics with innovative technology, reinforcing the cement matrix while minimizing polymerization shrinkage.

The result is exceptional marginal integrity, superior long-term durability, and enhanced esthetics—free from dark lines caused by microleakage and microbial infiltration. Paired with Rodin Try-in-Gel, it delivers a complete, high-performance solution for clinicians seeking exceptional strength, reliability, and esthetic excellence in their restorative workflows.

**Rodin® EnVision**  
Veneer and Cement System

NEW!

- **Ultra-Thin Capability:** Prints as thin as 0.2 mm, enabling clinicians to deliver no-prep and minimally invasive veneers.
- **Strength with Esthetics:** High ceramic filler content delivers lasting durability without compromising translucency
- **Verified Compatibility:** Resin, bond, and cement designed and validated as a unified system.
- **Two-Way Bond Strength:** Secure adhesion between veneer and tooth for dependable, long-term performance

Optimized for 3D-printed veneers, EnVision 3D Resin achieves a minimum printable thickness of as little as 0.2 mm, allowing clinicians to deliver esthetic enhancements while preserving natural tooth structure. This breakthrough in material design expands the potential for no-prep and minimally invasive veneers without compromising on strength or beauty.

Pac-Dent is able to uniquely offer a complete end-to-end veneer and cement system from initial production to final placement of veneer. With EnVision resin developed alongside Rodin Bond and Veneer Cement, every element of the restorative process works with verified compatibility, giving clinicians unparalleled confidence in strength, esthetics, and predictability.

**Rodin® TempClear**  
Temporary Cement

NEW!

Compared to Kerr Temp-Bond™

- **Streamlined Placement:** Distinct composition for easy placement, ensuring a secure hold for various temporary dental applications
- **Ideal Consistency:** Ensures strong adhesion and easy removal for transitioning to permanent restorations
- **Tailored for 3D Printing:** Ideal match for temporary crowns and bridges crafted from advanced 3D resin materials
- **Versatility:** Can be effectively used as a liner or base under ceramic restorations

Before

After

Rodin TempClear is a premium temporary dental cement developed for securing temporary dental restorations, including crowns and bridges. Its unique composition has been designed to streamline the placement process, ensuring a secure hold that is both easy to achieve and reliable across various applications.

Providing high bond strength to maintain the stability of the restoration, Rodin TempClear reduces the risk of leakage into the prepared tooth. This advanced cement features the ideal consistency for seating restorations, delivering strong adhesion while maintaining ease of removal for transitioning to a permanent restoration.

- 453101 2 x TempClear Syringes (11.8 g each)  
20 x Mixing Tips

**Rodin® TempCem**  
Automix NE With Releasing Agent

- Biocompatible
- Minimal post-sensitivity
- Strong bonding
- Excellent marginal seal
- Exceptionally easy to handle
- Thin film thickness
- X-ray opacity
- Negligible solubility
- No interference with cementation

A non-eugenol resin based temporary cement. Supplied in an easy-to-use automix dual barrel syringe with 15 mixers. The included releasing agent is specially formulated for easy removal of the temporary cement.

- PD130 1 x 6 g Rodin Automix NE, 15 x Brown Mixing Tips
- PD132 1 x Rodin NE Part A (10 ml), 1 x Part B (10 ml)

## Rodin<sup>®</sup> Bond Dental Adhesive System

NEW!

Compared to Kerr OptiBond<sup>™</sup> Solo Plus, 3M<sup>™</sup> Scotchbond<sup>™</sup> Universal Plus

- **Best-In-Class Adhesion:** Nanohybrid glass filler technology provides incredible bond strength and reliable adhesion to a comprehensive array of dental materials, including dentin, enamel, zirconia, as well as various dental metals such as PFM
- **Full Compatibility:** It can be used with light-cured, self-cured, and dual-cured composite materials for both direct and indirect restorations
- **Efficiency:** The flip-top cap design saves valuable time and provides a "one-drop" flow of adhesive while ensuring smooth application
- **Complete Solution:** Combine Rodin Bond and SensiGuard for a comprehensive bonding solution that not only enhances bonding but also safeguards against postoperative sensitivity through dentin tubule sealing

Rodin Bond is a cutting-edge light-cured dental adhesive for both direct and indirect bonding applications. The incorporation of advanced glass filler technology reinforces the hybrid zone and penetrates dentin tubules, ensuring exceptional bond strength compared to traditional unfilled adhesives. Pair Rodin Bond with SensiGuard for significantly improved shear bond strength and adhesion to both direct and indirect surfaces.

Rodin Bond and SensiGuard use a cutting-edge flip-top cap design, enabling accurate "one-drop" adhesive dispensing with a single hand. This packaging feature reduces waste and streamlines the clinical workflow, ensuring smooth application.

Additionally, Pac-Dent's "trophy" unit dose packaging maintains adhesive integrity by shielding it from air and moisture, ensuring reliable and precise bonding results.

### Rodin Bond Technique Guide

#### Direct Bonding

1 Etch enamel and dentin for 15 seconds. Rinse for 5 seconds and gently air dry. Do not desiccate. The use of SensiGuard following etching is optional.

2 Apply a coat of Rodin Bond with an applicator tip and gently agitate for 10 seconds.

3 Thin/dry for 10 seconds using 1/4 to 1/2 air pressure. Light cure for 10 seconds.

4 Place composite and light cure.

#### Indirect Bonding

1 Etch enamel and dentin for 15 seconds. Rinse for 5 seconds and gently air dry. Do not desiccate.

2 Apply SensiGuard gently for 15 seconds. Air dry for 5 seconds.

3 Apply Rodin Bond with an applicator tip for 15 seconds, using a light brushing motion. Air thin for about 5 seconds.

4 Select appropriate shade of resin cement. Refer to manufacturer's instructions.

5 Gently seat restoration. Remove excess cement.

6 Light cure all surfaces.

### SensiGuard™ HEMA-based Desensitizing Agent

NEW!

Compared to Zest Dental MicroPrime™, Kulzer Gluma®

- **Patient Comfort:** Significant reduction of post-operation sensitivity in patients
- **Visibility:** Distinct yellow tint provides unparalleled visibility during procedures, ensuring precise and controlled application
- **Precision:** Optimal consistency guarantees accurate placement, giving you the confidence to deliver exceptional results every time
- **Anti-Bacterial:** Potent antibacterial qualities reduce the chance of caries formation beneath restorations, delivering long-lasting protection for your patients
- **Universal Compatibility:** Seamless integration with a wide range of dental adhesives and workflows
- **Efficiency:** Save time without sacrificing precision. The flip-top cap design guarantees efficient application while providing a controlled single drop per procedure

Sensiguard is a groundbreaking antibacterial desensitizer that seals dentin tubules to prevent postoperative sensitivity and significantly reduces the risk of caries formation beneath restorations. In addition to these desensitizing qualities, Sensiguard significantly enhances bond strength through the rewetting of collagen fibers in the dentin.

When combined with a dental adhesive such as Rodin Bond, Sensiguard acts as both a desensitizer and a primer. This unique formulation revitalizes collapsed collagen fibers, providing unparalleled monomer penetration, creating exceptional shear bond strength and steadfast adhesion to dentin tubules.

Longitudinal sections of a specimen treated with SensiGuard at x5,000. The circled area shows an occluded area.\*

**Rodin® Silane Primer**  
Permanent Liquid Bonding Agent

NEW!

Compared to Kerr's Nexus 2 Silane Primer

- **Compatibility:** Rodin Silane Primer is compatible with both self-etch and total-etch bonding agents, providing versatility in various clinical scenarios
- **Adhesion Promotion:** Effectively promotes adhesion between resin composites and silica-based or silica-coated indirect restorative materials
- **Precision:** Specialized packaging design allows for precise "one-drop" delivery of primer

Introducing Pac-Dent's Rodin Silane Primer, a meticulously engineered single-component solution designed to elevate the bond strength of composites and resin cements. By carefully preparing the surface for adhesion, Rodin Silane Primer fosters initial bonds with the cement before restoration placement, ensuring a successful repair while enhancing long-term bond strength and wear resistance. Applying an additional coat of Rodin Silane Primer facilitates the formation of covalent bonds, heightening the reactivity of the restorative surface to the repair resin.

This increased wettability of the composite substrate surface enables the bonding agent to flow through surface micro-retentions more effectively, further enhancing the restoration's integrity.

**Applications**

- ✓ Silanization of silica-based ceramic restorations prior to cementation
- ✓ Surface treatment of etched glass ceramics before resin bonding
- ✓ Pretreatment of porcelain veneers, inlays, onlays, and crowns
- ✓ Chairside repair of fractured or chipped ceramic restorations
- ✓ Enhanced bonding between resin-based materials and ceramic surfaces
- ✓ Use in ceramic repair workflows involving composite resins

**471201 Rodin Silane Primer 1 X 5 ml bottle**

**Rodin Ceramic Bonding Workflow**

**iMatrix® Clear**  
Sectional Matrix System

NEW!

Compared to Bioclear Evolve Matrix and 360° Veneer Matrix Series, Garrison Composi-Tight®, Palodent®, Triodent® V3 Matrix

- 2 clear NiTi rings that provide optimal tooth separation with an undercut design for greater visibility and improved handling
- Clear, color coded mylar matrices for cure-through restorations with ideal marginal ridge
- Includes assorted composite polishing kit for high esthetic finishing of composite restorations
- Easy to place clear wedges that stay in place while providing a superior gingival seal

The iMatrix Clear Sectional Matrix System has been engineered to provide the ideal solution to the most tedious of Class II restorations.

The iMatrix Clear system features innovative clear Nickel Titanium (NiTi) matrix rings with a unique undercut design that allows for better handling and greater visibility, while being strong enough to avoid slipping and to provide consistent, ideal tooth separation. The clear mylar matrices and clear interproximal wedges allow ample light to pass through for complete cure-through and uniform restorations. The color coded, clear mylar matrices leave the composite with a more polished and contoured finish than traditional stainless steel matrices while having a more pronounced marginal ridge for correct anatomical form.

iMatrix®

Sectional Matrix System

Compared to Dentsply Palodent®, Ultradent Triodent®, Garrison Composi-Tight®, Garrison Strata-G™, Garrison NiTi™, Septodont SeptoMatrix, Clinicians Choice Dual Force™, Danville Materials Contact Matrix™, Premier® X5

- 2 nickel-titanium matrix rings that provide optimal tooth separation and increased longevity
- Matrix rings feature an undercut design for greater visibility and improved handling
- 3D matrix bands with pinholes for easy placement and removal
- Forms tight contacts for unmatched anatomical accuracy
- Stackable for multiple restorations

The iMatrix Sectional Matrix System features nickel-titanium rings with a unique undercut design, anatomically shaped 3D matrix bands with convenient pinholes, and adaptable wedges that combine to deliver predictable, high quality restorations and tight interproximal contacts, which effectively replicate natural tooth anatomy for optimal esthetics. The Matrix System is designed adapt to the challenges of wide cavities and missing cusps, allowing for minimal restoration finishing.

**PM-01 iMatrix Sectional Matrix System Starter Kit (with instruments):**

- 1 x Black Standard Ring
- 1 x Grey Narrow Ring
- 35 x Blue Medium Wedges
- 35 x Yellow Small Wedges
- 35 x Orange Large Wedges
- 35 x 5.5 mm Matrices
- 35 x 4.5 mm Matrices
- 35 x 6.5 mm Matrices
- 1 x Forceps
- 1 x Tweezers

**PM-02 iMatrix Sectional Matrix System Intro Kit (without instruments):**

iMatrix® Wedge

- Wedge profile matches tine shape for easy entry and placement to provide the ultimate seal
- Stackable wedge design

Size	100/pk
Small	PM-WS
Medium	PM-WM
Large	PM-WL

Technique for Class II Restorations

1. Select a matrix band that matches the tooth's occluso-gingival height. Wrap the matrix band around the tooth and shape it to the desired curvature using your fingers.

2. Firmly insert the largest wedge that fits the interproximal space, while holding the matrix band in place to prevent displacement.

3. Place the iMatrix ring low over the wedge using forceps to spread its arms. Press the matrix band down with a finger to immobilize it. iMatrix rings are stackable for various restorations.

4. Remove the iMatrix ring using the provided forceps by spreading the arms just enough to clear the tooth, pull out the wedge using the tweezers or fingers, and remove the band using the tweezers.

iMatrix® Coated Matrix

Compared to Triodent® SuperCurve Matrix, Dentsply Palodent Plus EZ-Coat, Garrison Composi-Tight® 3D Fusion™

- Ultra-thin, non-stick coating allows quick and easy removal
- Lifelike curvature design and pronounced marginal ridge improve anatomical precision
- Color-coded for instant size identification

iMatrix®-Disposable Matrix Disposable Bands

Compared to Ultradent's Omni-Matrix™, Medcom SafeMatrix™

- Disposable retainer and matrix band for superior convenience and safety
- Compact size allows increased visibility and patient comfort
- Lockable joint securely holds the matrix in place for ideal control
- Ideal thickness bands that adapt to all natural tooth contours & preparations
- Ergonomic thumbscrew system guarantees seamless and dependable functionality

The iMatrix-Disposable is a single-use, pre-assembled disposable matrix and retainer system designed for both composite and amalgam restorations of every class. The iMatrix-Disposable features a compact and easy-to-place matrix band that is easily adjustable for any quadrant or angle with a twistable handle to maximize patient comfort and a quick-release locking system for fast removal. The matrix bands are available in a V or pre-contoured shape that is adaptable to all tooth contours, allowing for tight contacts in any restoration.

### C&B Prompt™ 10:1

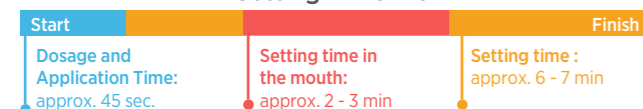

Temporary Crown & Bridge Material

- Exceptional strength and resistance to wear
- Defined elastic phase for easy cleanup
- True color stability with accurate Vita shades that match natural tooth appearance
- Minimal heat during polymerization
- Easy to polish to a long lasting luster

10:1 Self-Curing Temporary Crown & Bridge Material. Unique formulation featuring excellent mechanical and esthetic properties for short & long-term provisionals.

#### Setting Timeline

#### Each Intro Pack contains:

1 x 50 mL (76 g) Cartridges, 10 Mixing Tips, 1 x MP-04 4:1/10:1 dispensing gun, 2 x Aluminum Temp C&B Trays

- PD126-A1 Intro Pack, Shade A1
- PD126-A2 Intro Pack, Shade A2
- PD126-A3 Intro Pack, Shade A3

#### Each Refill Pack contains:

1 x 50 mL (75 g) Cartridges, 10 Mixing Tips

- PD123 Refill Pack, Shade A1
- PD124 Refill Pack, Shade A2
- PD125 Refill Pack, Shade A3

- 110351-25 10:1 Blue (Orange Inside) Mixing Tips, 25/bag
- 110352-50 10:1 Blue (Orange Inside) Mixing Tips, 50/bag

- MP04 1 x S Dispenser II Dispensing Gun, 50 ml cartridge 4:1/10:1
- PD-177P 1 x Dispensing Gun, 50 ml cartridge 4:1/10:1

### C&B Prompt™ 1:1

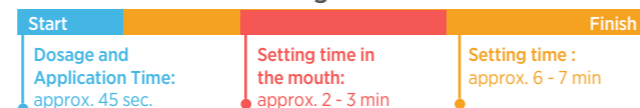

Temporary Crown & Bridge Material

- Biocompatible formula
- Easy handling and polishing
- Improved precision of application
- Lifelike restoration with natural translucency
- Excellent resistance to fracture

1:1 ratio temporary crown and bridge material. C&B Prompt is a self-curing, resin based composition designed for easy fabrication of temporary crowns and bridges. It sets in two stages, providing for easy handling. Curing is complete in four minutes with an initial setting in 90 seconds. For making repairs, C&B Prompt is compatible with self and light-cured resin based materials. Available in 3 lifelike natural-looking shades: A1/B1, A2 and A3. Each package contains 1 cartridge of 76 g material and 15 blue mixing tips.

#### Setting Timeline

#### Each Pack contains:

1 x 50 mL (76 g) Cartridges, 15 Mixing Tips

- PD120 Shade A1/B1
- PD121 Shade A2
- PD122 Shade A3

- PD211-25 Blue mixing tips refill, 25/bag
- PD211-50 Blue mixing tips refill, 50/bag

- PD-115P High performance dispensing gun 1:1 50ml cartridge, 1/box

- T550 Aluminum temp trays, Posterior, 50/pk
- T551 Aluminum temp trays, Anterior, 50/pk

### Rodin® EtchPro™

38% Phosphoric Acid Etching Gel

HIGHLY RATED BY A NON-PROFIT DENTAL RESEARCH ORGANIZATION

Compared to Ultradent Ultra-Etch™

- Timed release formula helps maintain a controlled and consistent etching process for optimal bonding
- Penetrates fissures and vertical surfaces
- Superior viscosity and vivid blue color for easy and precise handling
- Rinses off easily without residue

#### Self-limiting formula

Rodin EtchPro 38% phosphoric acid features an ideal viscosity that allows precise placement and excellent control. Its self-limiting etch formula creates an ideal etch pattern with an average depth of 1.9 µm from a 15-second etch, allowing for maximum adhesive penetration for increased bond strength.

The etchant's unique timed release formula creates an optimal dentin surface for resin bonding. While Rodin EtchPro is viscous, it easily penetrates into vertical surfaces and occlusal fissures due to increased capillary action from its unique chemical and physical properties. Its ideal viscosity prevents premature drying during procedures while preventing running or movement.

Rodin EtchPro is indicated for use on dentin and enamel to create an optimal bonding surface.

- 135 4 x 1.2 ml Syringes w/8 x Pre-bent Needle Tips
- 135-E Econo pack: 36 x 1.2 ml syringes
- 135-C Clinic pack: 144 x 1.2 ml syringes
- 231 Pre-Bent Needle Tips, 25 Ga, Etch, Blue, 100/pk

### Rodin® Porcelain

Porcelain Etching Gel

Compared to Pulpdent® Porcelain Etch Gel, Ultradent™ Porcelain Etch

- One-minute application
- Buffered acid minimizes irritation
- High visibility yellow gel
- Thixotropic - stays where you place
- Easy to rinse off

Pac-Dent's new 9.6% buffered Hydrofluoric Acid Porcelain Etch Gel features an ideal thixotropic design that allows for precise placement and excellent control. A one-minute application creates an ideal etch on porcelain crowns, inlays, onlays, bridges, veneers, and fractured porcelain surfaces to maximize bond strength.

Pac-Dent's superior formula ensures the porcelain etch gel will not stain porcelain, composites, or resin-based cements.

#### Applications

- ✓ Etching of porcelain restorations prior to bonding
- ✓ Surface treatment of porcelain veneers, inlays, and onlays
- ✓ Etching of ceramic crowns and bridges
- ✓ Chairside repair of fractured or chipped porcelain
- ✓ Preparation of glass ceramics before silanization
- ✓ Use in ceramic repair workflows involving composite resins

- 441101 4 x 1.2 ml Syringes w/8 x Pre-bent Needle Tips
- 231 Pre-Bent Needle Tips, 25 Ga, Etch, Blue, 100/pk

## Rodin® Optiflow II

Nano Flowable Composites, LC

NEW!

- Syringe allows for a convenient yet controlled dispensing process
- Improved polymerization shrinkage
- Optimized viscosity allows for precise procedures
- Holds shape while filling cavities

Rodin OptiFlow II is a visible light-cure resin-based flowable restorative dental composite suitable for class III, class IV, and class V restorations. Additional functions include the repair of enamel defects, repair of porcelain restorations, minor occlusal build-ups in non-stress-bearing areas, pit and fissure sealant, cement for ceramic/composite veneers, incisal abrasions, and core build-ups.

Rodin OptiFlow II's unique resin-filler chemical formulation provides the ideal flowing consistency for posterior restorations, as well as ease of polish and high gloss retention for anterior restorations.

### Superior Adaptation

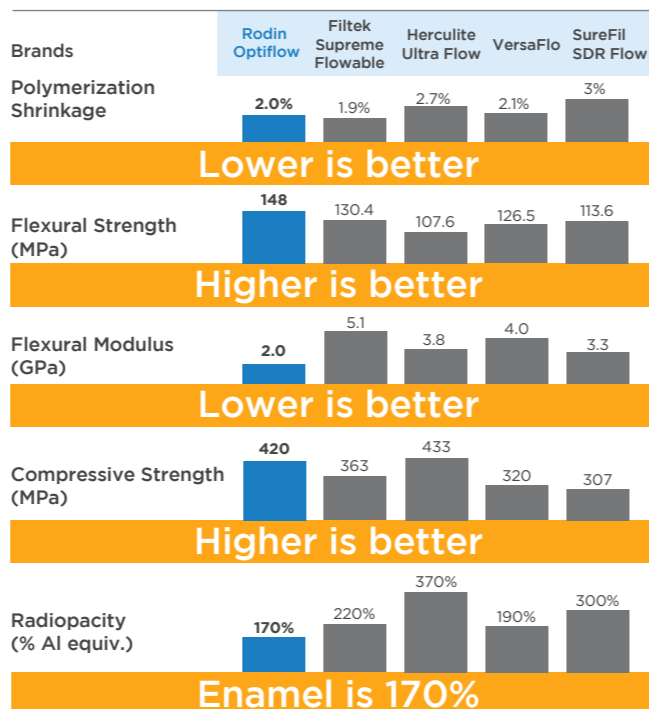

Ensures a tight marginal seal, decreasing voids

Before After

### Applications

Rodin Optiflow II flowable composite is an excellent choice as a cavity liner or base, with high strength and radiopacity. Its full list of indications include:

- Cavity liner or base
- Blocking out undercuts
- Repair of direct and indirect aesthetic restorations
- Temporary crown and bridge
- Defective enamel margins
- Sealing
- Tunnel restorations
- Direct restorative for small Class I, II, III, IV and V cavities

### Rodin® Universal Nanohybrid Composites

- Lifelike restoration with very high radiopacity
- Effortless handling and long working time
- Available in both syringe and capsule
- Fluoride-releasing, caries protection
- Superior strength and high wear resistance
- Polish retention and high luster
- Minimal post-sensitivity and tooth-stress

Rodin Universal Nanohybrid composite is formulated with a combination of inorganic and organic fillers. These materials are designed to offer a number of benefits, including excellent handling properties, high polishability, and good esthetics. They are often used for a variety of dental applications, including filling cavities and restoring teeth.

Pac-Dent's Nanohybrid Dental Composite is designed to offer optimal handling and ease of placement, as well as long-lasting polishability and high wear resistance. It is intended to provide lifelike esthetics and a lasting appearance for dental restorations, making them indistinguishable from natural teeth.

#### PD-7680S Rodin Universal Nano Syringe Kit:

- 1 x 4 gm Syringe Each in Shade A1, A2, A3, and B1
- 1 x 7ml PacBond
- 20 x Etching Tips
- 1 x Brush Tip Handle
- 3 x 1.2cc Etching Gel
- 2 x Well Mixing Wells
- 1 x Brush Tip
- 1 x Mixing Pad

#### PD-7680U Rodin Universal Nano Unit Dose Kit:

- 80 x 0.2 gm capsules, 20 of each shade A1, A2, A3, and B1
- 1 x 7ml PacBond
- 20 x Etching Tips
- 1 x Brush Tip Handle
- 3 x 1.2cc Etching Gel
- 2 x Well Mixing Wells
- 1 x Brush Tip

## Rodin® InteCem

Intermediate Restorative Material

NEW!

Compared to Dentsply IRM®

- Provides sedative like properties for hypersensitive tooth pulp
- High strength and abrasion resistance with low solubility
- Acts as a proper thermal insulator
- Ideal as a base under resin-free restorative materials
- Remains in place up to one year

The Rodin InteCem Intermediate Restorative Material is indicated for intermediate restorations intended to remain in place for up to one year.

This unique material, composed of polymer-reinforced zinc oxide-eugenol, uses the sedative like properties of eugenol to relieve hypersensitive tooth pulp, and functions as a proper thermal insulator for increased patient comfort. Rodin InteCem serves as an ideal base under resin-free cements and restorative materials including amalgam, inlays, and onlays.

Rodin InteCem has high strength properties similar to zinc phosphate cements, while offering high abrasion resistance, optimal sealing properties, and low solubility for superior restoration performance.

### Applications

- ✓ Protective Base under resin-free restorative materials and cements
- ✓ Intermediate direct restorative filling
- ✓ Restorative emergencies
- ✓ Caries management
- ✓ Restoration of deciduous teeth

Note: Never use Rodin InteCem with resin based restorations, because eugenol inhibits polymerization.

The bright-white material, Rodin InteCem, is being placed with the use of the instrument shown in the image. Newly mixed Rodin InteCem has a puttylike consistency and must remain dry until it is completely set.

**452201 Rodin InteCem Kit:**  
1 x 38 g Powder & 1 x 14 mL Liquid

## Rodin® N2-Free Glaze

Universal Light-Curable Sealant

NEW!

- **Superior Esthetics:** The natural translucency and shine provided by the glaze lock in the customized staining, ensuring vibrant, life-like results that mimic real enamel and blend seamlessly with the patient's natural dentition
- **Sealing and Repairing:** The incorporation of the glaze seals and repairs pits and micro-fractures resulting from support removal and finishing processes, ensuring that restorations maintain their esthetic and functional properties over time
- **Color Stability:** Designed for excellent color stability, the glaze resists discoloration and staining, preserving the natural appearance of the restoration even after prolonged exposure to food, beverages, and other oral conditions.
- **Versatility:** Applicable on a broad range of dental materials, including hybrid ceramics, PMMA resins, and CAD/CAM composites, enhancing its utility across various treatments.

Glaze N2-Free, is a biocompatible, Class II, light-curable resin designed for surface characterization of dental restorations, including hybrid ceramics, PMMA resins, and CAD/CAM composites. It neutralizes the oxygen inhibition layer for complete polymerization, preventing tacky surfaces and ensuring a smooth, glossy finish that mimics natural enamel.

Independent third-party testing shows that when applied after printing and before final curing, Glaze N<sub>2</sub>-Free achieves a high gloss finish of 78 units with minimal polishing required. Wear simulation demonstrates durability up to 350,000 cycles — equivalent to about 2.5 years of clinical use—ensuring a strong, esthetic finish without the need for specialized curing equipment.

### Applications

**24031 Rodin Glaze N2-Free, 5 mL Bottle**

**24015 Rodin Glaze N2-Free, 15 mL Bottle**

**iGlo™**

**Silicone Polisher**

Compared to Dentsply® Enhance® and PoGo®

- **Enhanced Hygiene:** kit provides significant reduction of surface roughness and bacterial retention
- **Comprehensive Coverage:** the iGlo Silicon Polisher System's silicone discs provide exceptional coverage, ensuring no detail is overlooked during the finishing and polishing process
- **Optimal Torque:** the reinforced mandrel delivers optimal concentric torque, ensuring precision and control during the polishing process
- Latex-free

The iGlo Silicone Polisher Kit provides a comprehensive set of tools for finishing and polishing, resulting in smooth, plaque-resistant restorations with lifelike and natural esthetics. With silicon points, cups, and discs, this innovative polishing kit offers a comprehensive solution for achieving precise finishing and polishing of anterior and posterior composites, as well as various dental surfaces.

BluEz Applicator Tip	129

### Pre-Bent Needle Tips

Disposable, blunt end pre-bent needle tips for use with etchants, resins and flowable composites. Available in 5 sizes/colors: 18 Ga.pink, 20 Ga.yellow, 20 Ga.black, 22 Ga.gray and 25 Ga.blue. Each package contains 100 needle tips.

Pre-Bent Needle Tips	100/pk
18 Ga. Liner, Pink	227
20 Ga. Flow-Sealant, Yellow	228
20 Ga. Flow, Black	229
22 Ga. Sealant-Cement, Gray	230
25 Ga. Etch, Blue	231

### ProDose™

Disposable Tubes & Plugs

Needle Tubes and Plugs	100/pk
Photo-Blocking Brown, 20 Ga, Low Viscosity	PD-R902B
Teal, Low Viscosity	PD-L903T

Separate Tubes and Plugs	100/pk
Photo-Blocking Brown, Low Viscosity	PD-L904B
Clear, Medium Viscosity	PD-M905C

Tubes and Plugs	100/pk
Black, High Viscosity	PD-906
Orange, High Viscosity	PD-H907B

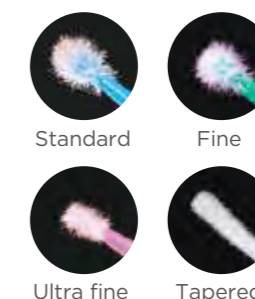

### MicroPro™

Micro Applicators & Dispenser

Disposable, all-purpose micro applicators. Constructed with non-linting fiber ball ends. Ideal for applying sealant, etch, adhesives, and more.

MicroPro Micro Applicators	400/box
Standard, Blue (2.0mm)	901
Fine, Green (1.5mm)	902
Ultra fine, Purple (1.0mm)	903
Tapered, White	904

MicroPro Micro Combo	kit
1 x Dispenser, 50 x MicroPro Micro Applicators, Fine, Green	413101

### Disposable Dappen Dishes

Disposable and available in 4 colors: white, yellow, blue and pink.

Dappen Dishes	1000/pk
Assorted Colors	004

Dappen Dishes	250/pk
White	004W
Yellow	004Y
Blue	004B
Pink	004P

### Mini Brush Applicators

Each package contains 100 applicators. Specify color when ordering.

Mini Brush Applicators	100/pk
Assorted	<b>500M</b>
Blue	<b>500MB</b>
Red	<b>500MR</b>
Yellow	<b>500MY</b>
Green	<b>500MG</b>

Bendable Tip

### Mixing Wells

Disposable mixing wells, available in 2 types: 2-well and 4-well. Each package contains 200 wells.

Mixing Wells	200/pk
4-Well	<b>906</b>
2-Well	<b>907</b>

2-well

4-well

### ProJect™

#### Composite Dispensing Gun

- Does not require hand adjustment
- Locking mechanism prevents carpule from dislodging
- Maintains balance with precision handling
- Compatible with all Unit-Dose materials on the market
- Ergonomic and comfortable to use

ProJect is a sleek, lightweight compule dispensing gun for precise placement of composite materials. It offers a comfortable grip, a secure compule lock, and smooth trigger control.

**PJ-01** 1 X ProJect Composite Dispensing Gun

### Composite Dispensing Gun

- Ergonomically designed dispensing gun
- Compatible with most unit-dose tips
- Ideal for all viscosity materials

**CG-01** 1 x Composite Dispensing Gun  
**CG-02** 1 x Composite Dispensing Gun with Metal Tip

# RapidCeram™

## Uncompromised Strength, Accelerated Speed

Optimized for high-speed workflows, RapidCeram is a ceramic nanohybrid resin designed primarily for same-day delivery of crowns, bridges, and other long-term restorations. With print times up to twice as fast as other ceramic-filled resins, RapidCeram enables same-day chairside and laboratory restorations with unmatched speed, esthetics, and durability.

### Benefits & Features

- 

**UP TO 2X**  
High-Speed Printing
- 

Best-in-Class Esthetics
- 

**51+**  
Contains Over 51% Ceramic Filler
- 

Precision Fit

### APPLICATIONS

RapidCeram	EnVision	Sculpture 2.0	Titan
<ul style="list-style-type: none"> <li>Recommended for Same-Day Restorations</li> <li>Prints up to 2x as fast as other resins</li> <li>Used for crowns, denture arches, bridges</li> <li>Over 51% ceramic-filled</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Printed Veneers</li> <li>Minimum Print Thickness as low as 0.2mm</li> <li>Used for no-prep veneer applications</li> <li>Over 51% ceramic-filled</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Permanent Crowns</li> <li>Best-in-Class Strength and Wear Resistance</li> <li>Used for long-term temporary and permanent fixed restorations</li> <li>Over 60% ceramic-filled; zirconia-infused</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Full-Arch Restorations</li> <li>Best-in Class Impact Resistance</li> <li>Used for All-on-Xs, full arch denture teeth</li> <li>Over 51% ceramic-filled</li> </ul>

## Material Comparison

RapidCeram is engineered for high performance in same-day workflows. As shown in the graphs below, RapidCeram outperforms key competitors with its balanced ceramic filler content and impressive mechanical strength. This ensures each restoration is both durable and esthetic, giving clinicians confidence in every result.

\*Data provided by Dr. Russell Giordano of Boston University

## Same-Day Workflow

RapidCeram and Glaze N2-Free can be paired to create a true same-day restoration workflow. RapidCeram delivers fast, accurate prints, while Glaze N2-Free provides a durable, esthetic finish—allowing you to go from scan to final restoration in a single visit.

“As a power user of 3D printing in clinical practice we are enjoying using RapidCeram for everything from full arch hybrids to single crowns. RapidCeram prints faster on our existing equipment allowing us to increase productivity without additional capital expenditure or workflow disruption.

- Dr. Rick Ferguson DMD,DABOI/ID,DICOI

## EnVision™ NEW! Veneer System

Optimized for 3D-printed veneers, EnVision achieves a minimum printable thickness of as little as 0.2 mm, allowing clinicians to deliver esthetic enhancements while preserving natural tooth structure. This breakthrough in material design expands the potential for no-prep and minimally invasive veneers without compromising on strength or beauty.

### Benefits & Features

**Proven Quality**

**Ultra Thin Printability**

**Cohesive Bonding System**

**Specialized Indications**

### Streamline Workflow

The system's digital integration—from scanning to chairside 3D printing—simplifies procedures and reduces the number of appointments, making it faster and more efficient than traditional methods.

“Both my patients and I have been extremely impressed with the entire Rodin lineup of products. Everything from the original Sculpture to Titan for my All-on-X cases. After using EnVision, I can confidently say this is one of the best resins on the market. It's strong, handles well, and is very aesthetic. It's a game changer!

- Dr. Tai Ha, DDS

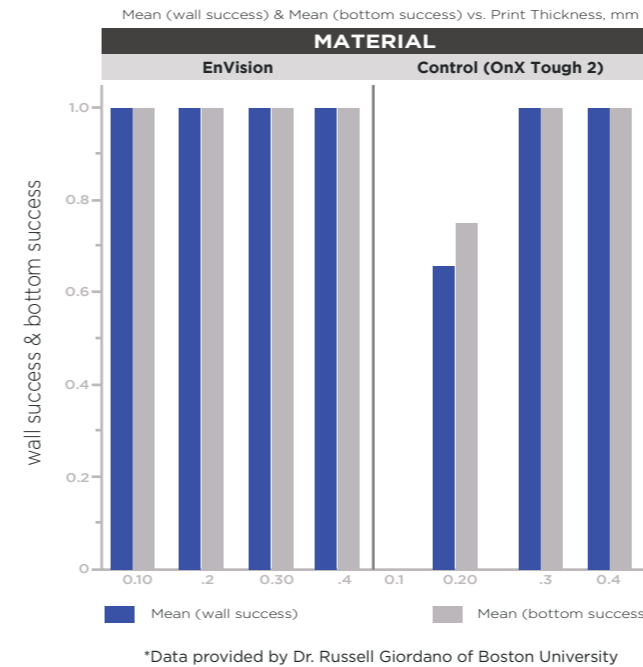

Images provided by Dr. Tai Ha

## Ultra-Thin Precision, Unmatched Strength

EnVision delivers reliable structural integrity at just 0.2 mm thickness—far thinner than traditional ceramic hybrids or posterior-grade printable resins. This ultra-thin capability makes it ideal for:

- Feather-edge margins in no-prep veneer cases
- Esthetic mockups and try-ins where minimal thickness improves fit and comfort
- High-definition layering for detailed anterior esthetics

Competitor material showed instability below 0.3 mm, increasing the risk of edge fractures and post-processing detachment.

## Titan

### Ceramic Nanohybrid

Optimized for full-arch provisionals, hybrid dentures, and denture teeth, Titan balances durability and fracture resistance to meet the demanding requirements of long-span restorations. Retaining the ceramic nanohybrid qualities of its predecessor, Titan incorporates a modified flexural modulus engineered for increased impact resistance, allowing it to absorb functional stress without compromising strength, stability, or esthetics.

#### Benefits & Features

Improved Flexibility

High Impact Strength

Improved Aesthetics

Optimal Durability and Toughness

Vita Classic Shade Matching

Lifelike Incisal Translucency

FDA 510K/Health Canada/TGA Cleared

#### APPLICATIONS

Titan	EnVision	Sculpture 2.0	RapidCeram
<ul style="list-style-type: none"> <li>Recommended for Full-Arch Restorations</li> <li>Best-in Class Impact Resistance</li> <li>Used for All-on-Xs, full arch denture teeth</li> <li>Over 51% ceramic-filled</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Printed Veneers</li> <li>Minimum Print Thickness as low as 0.2mm</li> <li>Used for no-prep veneer applications</li> <li>Over 51% ceramic-filled</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Permanent Crowns</li> <li>Best-in-Class Strength and Wear Resistance</li> <li>Used for long-term temporary and permanent fixed restorations</li> <li>Over 60% ceramic-filled; zirconia-infused</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for Same-Day Restorations</li> <li>Prints up to 2x as fast as other resins</li> <li>Used for crowns, denture arches, bridges</li> <li>Over 51% ceramic-filled</li> </ul>

## Titan

### Ceramic Nanohybrid

Titan boasts greater impact resistance than its other ceramic nanohybrid counterparts. This lower flexural modulus value indicates that the material is less rigid, improving the fracture resistance of the printed restoration. Titan's higher fracture toughness makes it the ideal choice for high impact prosthetic indications.

“Congratulations to Pac-Dent for their continuous innovation. Rodin Titan's dynamic flexural modulus provides the flexibility needed for printing screw retained prostheses and removable indications. I endorse Titan and the remarkable benefits it presents to clinicians and patients alike.”

- Dr. Rick Ferguson DMD, DABOI/ID, DICOI

# Sculpture 2.0

## Zirconia Nanohybrid

Sculpture 2.0 is the next monumental evolution of Pac-Dent's crown and bridge material. This zirconia-infused nanohybrid has been engineered to transcend the standards of permanent dental restorations. This next-generation resin achieves previously unseen levels of flexural strength and ceramic filler content, redefining what can be achieved through 3D printed restorations.

### Benefits & Features

 <b>Unmatched Strength</b>	 <b>Best in Class Radiopacity</b>	 <b>Improved Aesthetics</b>	 <b>Qualifies for Select ADA Reimbursement Codes</b>

## TruModel™ Model Resin

TruModel is an FDA-listed, high-precision 3D printing resin offering durability, accuracy, and clean, VOC-free handling for restorative and orthodontic workflows. Built on Titan chemistry, it provides stable, hard, biocompatible performance in two shades—Stone Tan and Light Gray—with matte, scanner-friendly surfaces that accept markings without spray. Validated for high-speed 385–405 nm DLP/LCD printers, TruModel delivers reliable accuracy, visibility, and workflow efficiency.

### Benefits & Features

-   
Regulatory-Grade Assurance
-   
High Dimensional Accuracy
-   
Validated Efficiency
-   
Matte Scanner-Friendly Surface

Independent third-party testing shows TruModel delivers high flexural strength and flexural modulus compared to leading model resins. This means printed models are more resistant to breaking, remain rigid under pressure, and hold their shape during post-processing. The result is a new standard in model materials, delivering stronger, more dependable workflows without sacrificing accuracy.

## Universal Resin Cleaner

### Versatile Alcohol-Free Wash Solution

Universal Resin Cleaner is a clear, low viscosity solution that safely and effectively removes uncured UV photopolymer resin from 3D printed objects. With true universal compatibility, it works equally well with ceramic filled and conventional resins, making it ideal for clinical and laboratory use. Free from isopropyl alcohol (IPA), this nonflammable cleaner is compatible with DLP, LCD, and SLA technologies and features a low odor formula with no harmful fumes for a cleaner, more comfortable workspace.

Its reusable formulation matches IPA's cleaning power while holding nearly twice the resin load before saturation, reducing waste and eliminating frequent filtering. The slower evaporation rate limits solvent loss, making it ideal for open bath systems, and it works seamlessly with ultrasonic cleaning stations for deep, thorough resin removal and optimal print quality.

#### Benefits & Features

True Universal Performance

IPA-Free Safer Alternative

High Capacity and Reusable

Slow Evaporation

Ultrasonic Bath Compatible

#### Compatibility

Ceramic-Filled Resins

Non Ceramic-Filled Resins

## Glaze N<sub>2</sub>-Free <sup>NEW!</sup>

### Universal Light-Curable Sealant for All Surfaces

Glaze N<sub>2</sub>-Free, is a biocompatible, Class II, light-curable resin designed for surface characterization of dental restorations, including hybrid ceramics, PMMA resins, and CAD/CAM composites. It neutralizes the oxygen inhibition layer for complete polymerization, preventing tacky surfaces and ensuring a smooth, glossy finish that mimics natural enamel.

#### Benefits & Features

Superior Esthetics

Sealing & Repairing

Color Stability

Unmatched Versatility

4.8

Dental PRODUCT SHOPPER BEST PRODUCT

Independent third-party testing shows that when applied after printing and before final curing, Glaze N<sub>2</sub>-Free achieves a high gloss finish of 78 units with minimal polishing required. Wear simulation demonstrates durability up to 350,000 cycles—equivalent to about 2.5 years of clinical use—ensuring a strong, esthetic finish without the need for specialized curing equipment.

Simulated Clinical Longevity (350,000 cycles = approx. 2.5 Years)

Gloss before Aging

\*Data provided by Dr. Russell Giordano of Boston University

“Glaze N<sub>2</sub>-Free has been one of my favorite product releases of 2025. It's so easy to apply and can be used extraorally and intraorally, making it a versatile material. For anyone doing printed dentures or restorations, it's a must have in the kit!”

# Palette 2.0

with Glaze N<sub>2</sub>-Free

Image provided by Andrew Priddy

The Palette 2.0 with Glaze N<sub>2</sub>-Free is an advanced light-curable staining system designed for hybrid ceramics, PMMA resins, and CAD/CAM composites, enabling dental professionals to achieve remarkable esthetic results across various curing workflows. Featuring the innovative Glaze N<sub>2</sub>-Free, the kit offers a broad range of shades for seamless, natural-looking restorations that match patients' dentition while enhancing durability and longevity. The glaze neutralizes the oxygen inhibition layer, ensuring complete polymerization and a smooth, glossy finish that strengthens each restoration, delivering a natural, translucent appearance.

“Palette 2.0 has working characteristics unlike anything I've encountered and is a serious addition to any 3D line. Material control is key to some stunning effects with this product.”

- Andrew Priddy

## Benefits & Features

**Green-State Application:** Bonds during post-curing as a functional layer for stain and wear resistance.

**Innovative Glaze Technology:** Glaze N<sub>2</sub>-Free neutralizes the oxygen-inhibited layer, delivering fully polymerized, durable, and polish-free finishes.

**Comprehensive Shade Selection:** Allows dental professionals to precisely color match restorations to the patient's natural dentition.

**Low Water Sorption and Color Stability:** Designed to resist discoloration, staining, and moisture, preserving restoration esthetics in oral environments.

## BioArch RPD™ NEW! Removable Partial Denture Resin

BioArch RPD is a high-performance 3D printing material engineered for removable partial dentures. Designed to deliver load-bearing stability without elastomeric flex, it provides the strength and resilience needed to withstand functional stresses while maintaining a precise, comfortable fit.

### Benefits & Features

Controlled Resilience and Rigidity

Unmatched Durability

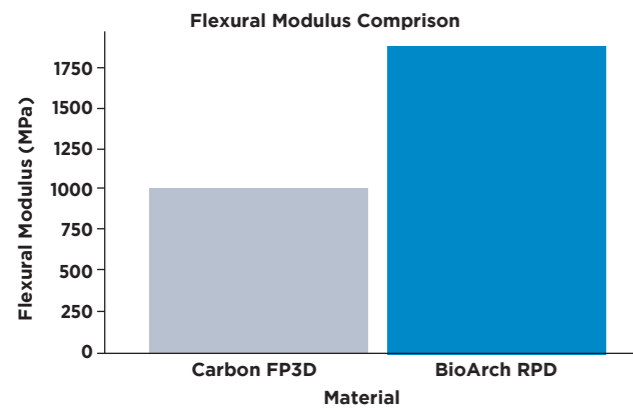

High Load-Bearing Stability

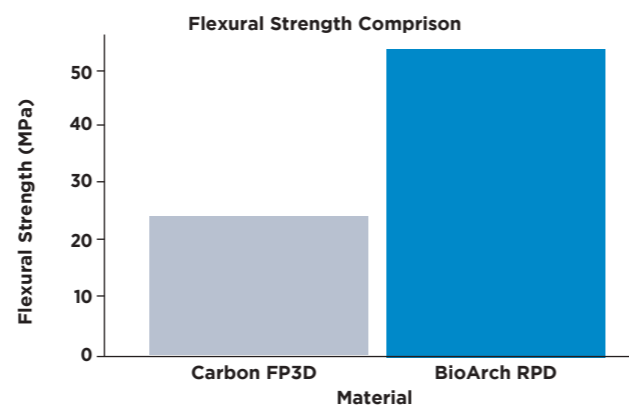

Exceptional Fatigue Resistance

### Technical Data

BioArch RPD's higher flexural modulus means a more rigid, stable partial denture that better maintains fit under chewing forces.

BioArch RPD's higher flexural strength means it is more resistant to bending and fracture, delivering a more durable partial denture in daily use.

Study by Dr. Russell Giordano II | BU Department of Restorative Sciences/Biomaterials

BioArch RPD for flexible partials sets a new standard for dental 3D printing. Finally we have an esthetically pleasing flexible material that can be printed on most dental 3D printers. This is the first printed material that can print clasps flexible enough to last without breaking. Rodin again brings innovation to the world.

-Dr. Rick Ferguson DMD, DABOI, DICOI, FACD

### Order Information

- 24070 BioArch RPD | Meharry, 1 kg/Bottle
- 24071 BioArch RPD | Clear, 1 kg/Bottle

## Soft Reline Kit Compatible with 3D, PMMA & Acrylic Dentures

Soft Reline features a unique silicone-based formulation that improves the fit and enhances the performance of both removable and fixed full or partial dentures. Tailored for superior bonding and tear strength, it is the ideal reline solution for 3D printed polymer bases, as well as PMMA milled and traditional acrylic materials.

4.5

### Benefits & Features

Exceptional Adhesion and Tear Strength

Ease of Workflow

Superior Performance

Esthetic and Patient Comfort

### APPLICATIONS

3D Dentures

PMMA Dentures

Acrylic Dentures

I've been using Soft Reline since it was first released and have been very pleased with the results. It is easy to apply and has been holding up well in my patients' mouths. The neutral taste means that patients don't complain during the procedure and are happy with the end result as well. I also like the fact that it bonds to a wide variety of materials meaning that I can keep a more limited inventory and don't need to worry about waste.

- Dr. Russell Schafer, DDS

### Order Information

- 24006 Soft Reline Kit
- 24007 50 mL Soft Reline Silicone Cartridge
- 240013 Wide Mouth Mixing Tips Refill, 48/pk
- 24008 10 mL Adhesive Primer

Kit Contents

**1**  
**VPS Soft Reline Cartridge, 50mL**

Silicone-based reline material delivers excellent bond strength and tear resistance for 3D-printed, PMMA milled, and traditional acrylic dentures.

**2**  
**VPS Primer, 10mL Bottle**

A bonding primer for VPS-based reline materials that enhances adhesion and durability between Soft Reline and denture bases.

**3**  
**Yellow 1:1 Wide Mouth Mixing Tips Refill, 6 pk**

Wide mouth mixing tips designed for efficient and consistent dispensing of 1:1 ratio materials.

**4**  
**Brown Polishing Wheel**

Gently smooths reline material without abrasion, delivering consistent, comfortable results.

**5**  
**Tapered Cone Finishing Stone**

Used to shape and blend with precision, ensuring a natural contour and smooth finish.

**6**  
**Applicator Swabs Refill, 6 pk**

Used to apply primer for improved adhesion between VPS-based reline material and denture bases.

**Splint 2.0**  
**Clear Bite Splint Resin**

Splint 2.0 is at the forefront of dental resin technology, offering unmatched stability, strength, and wear resistance. Precisely engineered for 3D printing of dental splints, night guards, retainers, and snoring devices, this resin is the ideal choice for patients experiencing severe bruxism, night grinding, or snoring issues. Its superior physical properties ensure both effectiveness and longevity.

**Technical Data**

	Pac-Dent
Flex Strength MPa (SD) ISO 20795-1	65 - 79 MPa
Flexural Modulus (MPa)	850 - 1090 MPa

**Benefits & Features**

Unmatched Strength

Highest Fracture & Wear Resistance

Optically Transparent

ADA Code D9944 & D9946 Insurance Qualified

**Order Information**

23865 Splint 2.0, 1kg/Bottle

**Flexisplint 2.0**  
**For Digital Corrective Oral Appliances** NEW!

Flexisplint 2.0 seamlessly integrates esthetics, durability, and user-friendliness with exceptional flexibility to ensure a snug, comfortable fit that minimizes discomfort and enhances the patient's overall experience. These characteristics combine to make the ideal candidate for printing comfort night guards, occlusal bite splints, and snoring appliances..

**Benefits & Features**

Clarity and Aesthetics

Rapid Production

Durability and Comfort

**Order Information**

24055 Flexisplint 2.0, 1kg/Bottle

## Surgical Guide 2.0

### Surgical Guide Resin

Surgical Guide 2.0 is a breakthrough in the field of dental surgical guides, offering unmatched flexural strength and durability. Specifically engineered for printing both full-arch and quadrant surgical guides, this high-performance resin is designed to withstand the rigors of surgical procedures, ensuring maximum shatter resistance and maintaining dimensional stability even under high temperatures.

#### Technical Data

	Pac-Dent
Flex Strength MPa (SD) ISO 20795-1	120 - 132 MPa
Flexural Modulus (MPa)	2038 - 2716 MPa

#### Benefits & Features

- Maximum Shatter Resistance
- Dimensional Stability for Autoclaving
- Optimized Visibility
- Distinct Coloration

#### Order Information

23867 Surgical Guide 2.0, 1kg/Bottle

## Try-In

### Denture Try-In Resin

Try-In provides an alternative for creating precise denture models before the final fabrication of denture bases and teeth. Designed to streamline your workflow, this ideal, low-cost solution ensures accurate verification of digital designs and intraoral fit checks.

#### Technical Data

	Pac-Dent
Flex Strength MPa (SD) ISO 20795-1	95-115 MPa
Flexural Modulus (MPa)	3871-4526 MPa

#### Benefits & Features

- Distinct off-white shade
- Simple verification
- Reduces waste

#### Order Information

3DR-TIF Try-In Resin, 1kg/Bottle

## RodinFlash™ Flash Curing Unit

Rodin Flash is a stroboscopic flash curing unit optimized for fast, uniform post-curing across a wide range of 3D-printed dental applications. Utilizing high-power, broad-spectrum UV-visible light, it delivers consistent energy distribution to support even polymerization, reliable mechanical performance, and high-quality surface results for printed restorations and appliances.

Developed in parallel with Rodin Resins, Rodin Flash has been optimized to maximize curing performance with Rodin materials. At the same time, it remains a true open system, supporting validated third-party resins through a continuously expanding curing library and delivering workflow flexibility while maintaining consistent, reliable results.

**Higher Mechanical Performance**  
High peak-intensity flash technology enhances polymerization efficiency, supporting a deep, complete cure across compatible materials.

**Color Stability & Consistent Results**  
A wide-spectrum flash wavelength promotes uniform curing across materials, helping maintain color stability and predictable esthetic outcomes.

**Convenient Open-System Resin Library**  
A continuously updated open resin library provides access to validated curing profiles, with intuitive touchscreen selection for fast, confident setup.

**Seamless Workflow with Minimal Footprint**  
A compact, space-efficient design fits easily into lab and clinical environments, while connected workflow support simplifies resin selection.

Technical Specifications	
Curing Chamber	4.37 × 4.37 × 1.71 inches (111 x 111 x 43.5 mm)
Device Dimensions	256 x 330 x 223.76 mm
Light / Source	Flash / Stroboscopic
Wavelength	280-950 nm
Rated Voltage	110-240V
Weight	8.2 kg
Open / Close System	Open
N2 Compatibility	Yes

**APPLICATIONS**

Dental Model

Temporary Crown

Oral Corrective Appliances

Denture Bases

Denture Teeth

Surgical Guide

Ortho IBT

Castable

## CrownPod™ Compact, High-Speed 3D Printer

Rodin CrownPod is a compact, high-speed chairside 3D printer engineered for general dental practices. Designed to produce crowns, veneers, and 3-unit bridges, CrownPod delivers a fast, clean, and fully automated workflow that requires no manual resin handling. The system handles resin stirring, dosing, and cleanup internally – eliminating mess and reducing chairside complexity.

With a sealed print box system and automated resin management, clinicians can expect consistent results, reduced exposure to uncured resin, and predictable per-crown costs. For pre-designed restorations, the CrownPod can also operate without the need for CAD/CAM software or scanners, enabling a streamlined digital workflow through a built-in touchscreen and ready-to-print library.

### Streamlined Workflow Without Digital Design Tools

Crown designs can be selected and printed directly from the touchscreen with no scanners, PCs, or CAD/CAM software required.

### Clean, Staff-Friendly Operation

Designed for dental assistants and hygienists with guided setup, automated system checks, and minimal maintenance.

### Sealed, No-Contact Resin System

Automated resin dispensing and single-use print boxes eliminate manual resin handling, reducing mess, exposure, and cross-contamination risk.

### Fast, Scalable Chairside Platform

High-speed printing supports same-day production of crowns, veneers, and small bridges, enabling efficient, predictable chairside workflows.

#### APPLICATIONS

Single Crowns

Bridges

Veneers

## SOL SE Designed for Precision and Speed

SOL SE is the next evolution of the proven SOL 3D printing system, designed to increase productivity while maintaining the accuracy, reliability, and open system compatibility that dental professionals trust. Built as a direct upgrade to the SOL platform, the updated system delivers greater efficiency with the same dependable results.

Through the incorporation of new performance-driven technology, SOL SE delivers 40–60% faster print speeds, increasing daily throughput and reducing turnaround times. These enhancements allow clinics and laboratories to produce more cases per day while preserving predictable, repeatable results, making SOL SE a natural upgrade path for existing SOL users and a compelling solution for new customers seeking higher efficiency.

### Upgraded Print Speed

Delivers 40–60% faster print speeds compared to the original SOL, increasing daily throughput and operational efficiency.

### Validated Resin Compatibility

Supports leading dental resins across a wide range of 3D-printed dental applications.

### SOL-Proven Accuracy and Repeatability

Maintains the high dimensional accuracy and consistency trusted by clinics and laboratories worldwide.

### Proven SOL Hardware Platform

Built on the same reliable SOL architecture, ensuring long-term durability and dependable performance.

Technical Specifications	
Print Area	5.1 x 3.1 x 4.7 inches (129 x 80 x 120 mm)
UV Wavelength	385–405 nm
Layer Thickness	30–150 μm
Technology	LCD
Power Input	100–240VAC, 50–60Hz
Weight	40 lbs / 18 kg
XY Resolution	49 μm
Device Dimensions	11.5 x 10.7 x 16.4 inches (292 x 271 x 416 mm)

#### APPLICATIONS

Dental Model

Temporary Crown

Oral Corrective Appliances

Denture Bases

Denture Teeth

## SOL Plus

### High-Volume Digital Workhorse

Designed to supercharge dental 3D printing workflows. Experience SOL Plus' unmatched throughput - ideal for clinical full-arch dental models, and validated best-in-class resins - all in one easy-to-use table-top package that can also print biocompatible permanent crowns, bridges, splints, dentures, and more.

#### High Production Meets Precision

Print up to 28 full arches vertically or 8 full arches flat. 45 Qm resolution delivers fine details and smooth surface finishes.

#### Validated, Versatile Solution

100+ industry-leading resins validated with major certifications (MDR, FDA, TGCA, Health Canada). Native integration with CURIE Plus..

#### Fastest Heating Technology (2°C/min)

Built-in heating rod for optimal printing of viscous resins. Ready-to-print in under five minutes.

#### Direct Support

Ackuretta Concierge provides two-year warranty that includes remote onboarding, workflow training, and technical support. Live support with our multilingual team of experts.

#### Technical Specifications

Print Area	8.6 x 5 x 4.7 inches (218 x 127 x 120 mm)
UV Wavelength	385-405 nm
Layer Thickness	30-150 µm
Technology	LCD
Power Input	100-240VAC, 50-60Hz
Weight	66 lbs / 30 kg
XY Resolution	45 µm
Device Dimensions	17.3 x 14.6 x 19.9 inches (440 x 370 x 505 mm)

## CURIE Plus

### Biocompatible UV Curing Oven

Nitrogen-enabled UV curing powered by mix-matrix 365, 385, and 405nm LEDs that deliver unparalleled results. Engineered to produce biocompatible permanent and provisional indications, with a larger chamber capacity for 8 full arches.

#### Benefits & Features

High Capacity Curing

Validated with Top Resins

Compatible with Nitrogen Sources

No Flipping Prints Required

Seamless Integration with SOL

#### Order Information

**RS110010162** CURIE Plus, 1 Unit

## NFinity

### Nitrogen Generator

#### The Perfect Complement of CURIE Plus

Say goodbye to nitrogen tanks with the NFinity Nitrogen Generator. This desktop system supplies CURIE Plus with endless nitrogen cycles, enhancing the curing process to deliver superior mechanical strength and aesthetic results.

#### Benefits & Features

Space-Efficient

Up to 25% Increased Flexural Strength

Never Run Out of Nitrogen

Eliminate Tank Hassles

#### Order Information

**RS110010163** NFinity Nitrogen Generator, 1 Unit

## CLEANI Dual Tank Washer

Unleash the productivity of your dental practice with CLEANI. Save time and 50% less cleaning solution while removing 90% of resin residue in a gentle, two-stage process. Clean platforms and prints together, minimizing damage and boosting workflow efficiency.

### Benefits & Features

- Thorough Cleaning Superior Results
- Biocompatible Workflow for High-Volume Production
- Convenience at its Best

### Order Information

RS110010246 CLEANI with Dual Tanks, 1 Unit

## CURIE Versatile UV Curing Oven

Ideal for dental professionals who value biocompatibility and patient safety. CURIE is validated with 150+ resin profiles, and has a smart UV system that delivers a uniform 360° blast to guarantee safe applications such as splints crowns, occlusal guards, surgical guides, and more - no flipping required.

### Benefits & Features

- Space Efficient
- Conveniently Updated Library
- Validated Workflows
- Premium Performance

### Order Information

KT200200101 CURIE UV Oven, 1 Unit

## IMPRESSION & ACCESSORIES

Mixing Tips - Static/Dynamic Mixer - Impression Gun - Impression Trays - Type-O-Putty - Impression Cartridge Connectors - Impression Materials

### T-Mixer Mixing Tips

- Reduced material waste up to 30%
- No change in working environment angles
- More homogeneous mixing results enhance application safety

Innovative mixer design allows for a more compact shape, reducing material waste. Advanced technology leads to more efficient material processing, achieving more homogeneous mixing results.

T-Mixer	50/pk

### iMix® Static/Dynamic Mixer

- Designed for 3M Pentamix 2 and 3.
- No bleeding necessary, eliminating material waste.
- Reduce bubbles and save materials.
- Compatible with most dynamic mix cartridges.

**Patented Mixing Technology**

Only the blue area rotates, while the green area remains stationary, causing the materials to be compressed within this static chamber, thus greatly reducing bubbles.

The patented static/dynamic mixer is designed to combine the advantages of static and dynamic mixing in order to reduce bubbles normally caused by dynamic fast mixing of impression materials.

Compatible with Most Dynamic Cartridges

Dynamic Mixer	50/box
Red	PD-104

### iMix® Impression Gun

- Release lever and plunger are coordinated simultaneously to load and remove the cartridge
- Works with 1:1 and 2:1 cartridges

iMix impression gun is used to accurately extrude VPS impression materials and bite registration materials from cartridges. iMix impression gun fits all standard size cartridges.

PD-115	1 x HP mixing gun, 1:1
PD-177	1 x HP mixing gun, 4:1/10:1

### Opti-Quad™ Metal Reinforced Disposable Bite Trays

NEW!

Compared to Quad-Tray™

- Rigid aluminum design prevents distortion
- Features low sidewalls and wider arch
- Customizable arch to match every patient
- Large handle for effortless handling

Opti-Quad Bite Trays are rigid aluminum dual-arch impression trays designed to make distortion-free impressions easier than ever.

Opti-Quad Metal Reinforced Bite Tray	50/box
Full Quadrant Dual Arch	631101
Anterior Double Arch	631103

Opti-Quad XL Metal Reinforced Bite Tray	40/box
Extra Long Double Arch	631102

The Opti-Quad tray features an integrated mesh that prevents material loss, while extending to the handle to ensure the accurate impression of up to four teeth. Each impression tray features low sidewalls, a thinner distal bar, and an adjustable arch to match any arch size. Available in posterior, extra-long posterior, and anterior variations.

### iMesh™ Impression Trays

- Ergonomic handles for easy seating and removal
- Anatomical design for maximum comfort
- Quicker cementing requiring fewer adjustments
- Less chair time, impression material and corrections
- Thin, non-tear mesh for superior strength and maximizes intercuspation of the teeth to ensure an accurate bite

iMesh	40/box

### Type O Putty

#### VPS Impression Materials

- Excellent detail reproduction
- Pliable consistency
- Ultra high viscosity
- High tear strength
- Blends quickly and easily
- Easy removal from the patient's mouth

**001V** 2 x 300 ml Jars (1 base, 1 catalyst), Regular set  
**Working Time** - 2 min **Set Time** - 4 min

### Impression Cartridges Connector

HP cartridges connector to transfer unused left-over materials to charge another cartridge.

**PD-110** HP cartridges connector to transfer unused materials, 5/pk

### Elements™ Bite Registration

#### Impression Materials

- Low resistance consistency allows natural movement of the jaw
- Excellent hardness prevents distortion in disposable trays
- Thixotropic formula stays in place and will not drip, run or sag
- Excellent readability
- Variable set times

Elements Bite Registration materials are formulated to have a light, mousse-like consistency ideal for occlusal registration. The material is thixotropic and stays where placed. Elements Bite Registration materials offer variable setting times, sets rock hard and are easy to trim.

Set Speed	Working Time	Set Time
Regular Set	1 min 30 sec	3 min
Fast Set	45 sec	1 min 30 sec
Super Fast Set	30 sec	1 min

- PD185-4** Super Fast Set, Unflavored

### Elements™ VPS

#### Impression Materials

- No distortion under dimensional change or temporary deformation
- Detailed and precise replications without voids or gaps
- Hydrophilicity lasts throughout the total working time.
- Wide selection of setting times and viscosities

Elements VPS impression material provides consistent, accurate and stable impressions. It features excellent tear strength and elongation for dimensional stability and precise replications in any environment.

Elements VPS material flows into narrow crevices under pressure and immediately overcomes residual moisture to produce crisp detail of the preparation margin. It also resists dripping from the tooth into the oral cavity.

Set Speed	Working Time	Set Time

# Pac-Taper™

## Progressive Taper NiTi Rotary Files

Pac-Taper NiTi Compared to Dentsply ProTaper Next\*

Pac-Taper Conform Compared to Dentsply ProTaper\*, ProTaper Gold\*, EdgeTaper Blaze Utopia™

### The classic progressive taper file with enhanced flexibility

Pac-Dent's Pac-Taper files series uses advanced manufacturing techniques to maintain its multiple tapered design. The traditional progressive taper preserves the root structure while creating a funnel-shaped instrumentation. These versatile files come in non-heat-treated NiTi and heat-treated NiTi alloy (Conform) options, providing excellent cutting performance for different canal anatomies and safe retreatment solutions.

- Multi progressive taper creates a smooth enlargement of the canal without ledging or straightening
- Tapered shape canal enlargement for a convenient thermoplastic obturation
- Pac-Taper is also offered without heat-treatment or heat treated (Pac-Taper Conform)
- Pac-Taper Conform is balanced for cutting efficiency and flexibility with a proprietary heat-treatment process
- If the file is overstressed, Pac-Taper Conform will unwind it before it separation, warning that there is too much torsional stress
- Pac-Taper Conform has no spring-back effect. It can be pre-bent

Dentsply ProTaper, ProTaper Gold, ProTaper Next; EdgeTaper Blaze Utopia are trademarks of their respective holders. Use of their name does not imply any affiliation or endorsement from them.

# Pac-Taper™ Conform

(featuring a gold handle)

Perfectly balanced heat treatment that delivers both remarkable flexibility and unmatched strength.

The Pac-Taper Conform file series is crafted with precision, utilizing a specialized heat treatment process. This results in the production of Conform series NiTi files that are even more pliable than their predecessors, while still maintaining their cutting effectiveness. Consequently, the flexibility and cyclic fatigue resistance of Pac-Taper Conform files are heightened, leading to improved performance. Pac-Taper Conform is a reliable multi-progressive taper file with superior cyclic fatigue resistance.

## and Pac-File Conform Constant Taper NiTi Rotary Files

Compared to Sybron K3™, Twisted Files™, Dentsply Vortex®, Vortex Blue®, EdgeSequel™, Brasseler EndoSequence®

Introducing Pac-Files - an essential collection of constant taper files for your sequencing needs. These files come in .04 and .06 tapers and offer a complete range of tip diameters and tapers to meet all your protocol requirements. By alternating .04 and .06 tapers with identical sizes you can achieve a low engagement force progression of your files and avoid an unnecessary apical load of the file. The Pac-Files are available in non-heat-treated NiTi alloy or heat-treated (Pac-File Conform) and are recommended for use in all canal morphologies. You can smoothly transition to the Pac-Files using the same technique as other constant taper 04 and 06 files and achieve the same results at a suitable cost. Additionally, these files have great cutting performance and can be used for retreatments as well.

- Constant taper .04 and .06 collection of files (from 15 to 60)
- Triangular rhomboidal cross-section
- Mix and match to fulfill your technique protocol
- Pac-File is also offered without heat-treatment or heat treated (Pac-File Conform)
- Pac-File Conform is balanced for cutting efficiency and flexibility with a proprietary heat-treatment process
- If the file is overstressed, Pac-File Conform will unwind it before it separation, warning that there is too much torsional stress

Sybron K3, Twisted Files, Dentsply Vortex, Vortex Blue, Edgesequel, Brasseler EndoSequence trademarks of their respective holders. Use of their names does not imply any affiliation or endorsement from them.

# Pac-File™ Conform

## In what ways does Pac-Dent's Conform heat treatment impact the performance of a file?

Heat treatment optimizes material effectiveness under tough conditions by applying timed heating and cooling to solid-state alloys. In Endodontics, heat treatment enhances flexibility of NiTi files, improving fatigue resistance and rotation in curved canals. Pac-Dent has two different NiTi alloy phase options for constant (Pac-File) and multiple tapers (Pac-Taper), both non-heat-treated and heat-treated (Conform). Conform files use a special heat treatment process to be three times more flexible without losing cutting ability.

### 490% MORE RESISTANCE TO SEPERATION

Pac-Dent R/D lab test shows how different heat treatments affects a file's surface color. Different levels of heat resulted in blue, purple, and gold colors.

Pac-Dent's NiTi files are 490% more resistant to cyclical fatigue compared to regular NiTi files which substantially helps to reduce the incidence of file separation.\*

\*In-house tests, 90-degree curvature at 500 RPM. Data on file.

## Low Engagement Technique

### What is the Pac-File and Pac-File Conform Low Engagement Technique (L.E.T.)?

Engine-driven files have a tapered shape that creates a funnel-like opening, making it easier for irrigation and obturation to take place. The Low Engagement Technique uses various tapers from the Pac-File series in a specific order to prevent torsional forces on the file's apical end. The primary objective is to avoid the red area of action, which means working within a range of 20 to 30% amplitude after cutting.

For mild to severe curvature morphologies, it is advisable to use Pac-File Conform, a heat-treated extra flexible file, to prevent cyclic fatigue separation.

The technique described (L.E.T.) is the result of extensive experience, research-based knowledge, and numerous tests on various canal morphologies.

- Determine the temporary working length and the depth of the curvature.
- Insert Pac-File 25 .06 to the curvature length or until resistance. Withdraw the file and use brushing movements. Do not exceed 10 seconds.
- Use a Pac-Dent FlexCann 31 ga double-side port cannula to copiously irrigate
- Determine the W.L. with a SS K-file using the iRoot Pro Plus built in apex locator.
- Build a glide path using the PacGlider 15 .02 and Pac-File 20 .04 files to the W.L. After using the file for max. 5 seconds, copiously irrigate.
- Insert Pac-File 25 .04 to the W.L. After using the file for max. 5 seconds, copiously irrigate preferably with iVac (30s).
- Insert Pac-File 25 .06 to the W.L. After using the file for max. 5 seconds, copiously irrigate preferably with iVac (30s). exceed 10 seconds
- Finish with Pac-File 35 .04 or progressively with the file diameter/taper of your preference. After using the file for max. 5 seconds, copiously irrigate preferably with iVac (30s).

## Low Engagement Technique | Based On Average Morphology:

To prevent torsional fatigue and file separation during instrumentation, the recommended approach is to utilize the iRoot Plus Pro in AutoSense mode. This mode allows the motor to initiate rotation and shift to reciprocation motion in case the apical pressure surpasses the torque limit. Once the pressure on the instrument is relieved, the motor automatically reverts back to rotary mode.

### Curved and Narrow Canals

Upper molars MB2  
Calcified canals

**TIPS**

For mild to severe curvature morphologies, it is advisable to use Pac-File Conform, a heat-treated extra flexible file, to prevent cyclic fatigue separation.

### Curved Canals

Upper premolars  
Lower molar MB, ML  
Upper molar MB, DB

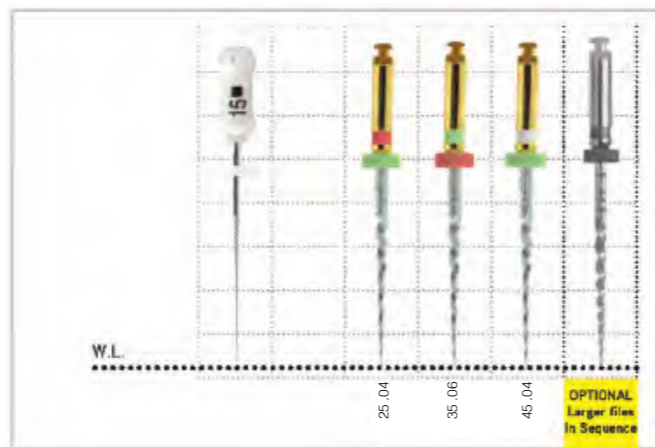

**TIPS**

To achieve the best cleaning and disinfection, it is recommended to use a 35 .04 final apical enlargement and perform final irrigation with the iVac green cannula.

## Rotary Glide Path File

When using the PacGlider, Pac-Dent's iRoot Pro Plus endomotor has got you covered with pre-existing presets. Simply navigate to Systems, select Pac-File, and then choose Pac-File 15 from the list of available files. Alternatively, the Safe GlidePath mode provides a secure and symmetrical 90/90 reciprocation motion that will carefully create the much-needed space for subsequent file enlargement. Rest assured that these options will help you get the job done with utmost confidence with subsequent larger files.

With the PacGlider special designed penetration tip, you can rest assured that it will efficiently and safely penetrate the root canal without any alteration to its original anatomy. This guarantees optimal effectiveness while preventing any potential damage.

Glide Path File 3/pk

Taper	Tip	21 mm	25 mm	31 mm
.02	16	<b>GPO221</b>	<b>GPO225</b>	<b>GPO231</b>

- Triangular rhomboidal low engaging cross-section
- Can be used in rotary and symmetrical reciprocation 90/90 provided by the iRoot Pro Plus
- The enhanced number of spirals incorporated in the design leads to a significant improvement in both the cutting capacity and flexibility
- High tolerance for torsional fatigue due to tailored heat treatment
- Ideal for for very difficult narrow and curve canals instrumentation initiation
- Special designed safe penetration non-cutting tip follows the anatomy without provoking deformations

The PacGlider file plays a critical role in ensuring that there is enough room for safe and effective engine-driven instrumentation. While other files can also create a glide path, PacGlider stands out from the rest. With the Pac-Dent iRoot Pro Plus motor, it works seamlessly in both rotary and symmetrical reciprocating movements, allowing operators to choose an efficient rotary enlargement or a more cautious oscillating approach. The PacGlider have undergone a tailored heat treatment that provides them with superb flexibility and the toughness required to create a smooth path before instrumentation, thanks to their more austenitic alloy phase expression.

## Do I need to create a glidepath?

Creating a glidepath is highly recommended before engine-driven instrumentation of curved and narrow canals. This involves using manual files of various sizes and gentle movements, and specialized rotary or oscillating NiTi files, to create a smooth path from the opening of the canal to the exit point. By doing so, the frictional forces on the shaping files are reduced, as the canal diameter becomes at least equal to the file tip size. In addition, it helps to level the flattened "V zone" of the canal geometry in the curved section, which in turn minimizes the risk of instrument failure due to torsional and cyclic fatigue. By preparing a glidepath, the risk of complications can be significantly reduced, making it an essential part of the root canal treatment process.

## Regressive Taper Reciprocating NiTi Heat Treated File

Compared to EdgeOne Fire, Dentsply Wave One

### The safety of the reciprocation movement reaching a higher level

One-File G reciprocating file series use the asymmetric reciprocation left cutting motion, allowing efficacious shaping of even curved root canals with less files. The proprietary heat treatment used in the One-File G manufacturing process gives more flexibility and 3 times increased cyclic fatigue resistance (comparing with a non-heat treated NiTi wire) letting a smooth, safe and efficient instrumentation.

- Can be used with standard reciprocating modes in existing motors (left cutting, ccw>cw)
- Enhanced cyclic fatigue resistance due to proprietary heat treatment process
- High cutting efficiency without compromising the control of the file inside the canal
- Available in different diameters and tapers (20 .07, 25 .07, 35 .06 and 45 .05) to fit perfectly in your sequence
- A rotary Glidepath file (15 .02) is available for very difficult narrow and curve canals instrumentation initiation

The iVac System is designed to be used during the root canal treatment irrigation phase, preferably connected to a piezo ultrasonic handpiece. The system was created using the three most important concepts established by the endodontic research and science for root canal irrigation and disinfection.

Ultrasonic Vibration, which acts as a chemical catalyst of the irrigating solutions in conjunction and microstreaming effects, determining a chemical-mechanical cleaning action in areas of difficult access in the root canal.

Apical Negative Pressure, by which the irrigation fluid moves from the pulp chamber to the apical limit without extruding beyond the foramen.

And Concomitant Irrigation, a principle whereby the volume of irrigating liquid is renewed continuously. Constant fluid replacement provokes ideal chemical activity by repositioning the solution for a new one.

### Volume of irrigating solution extruded through the apical foramen<sup>2</sup>

Apical third dentin walls after instrumentation

Apical third dentin walls after iVac final irrigation protocol

# Apical Negative Pressure Irrigation and Activation System

THE BEST OF ALL IRRIGATION SYSTEMS TOGETHER IN A SAFE AND INTUITIVE PRODUCT

- The iVac uses apical negative pressure with concomitant irrigation, which avoids the risk of extrusion of the irrigant while allowing the irrigating fluid to clean and disinfect the entire root canal to the working length<sup>1,2</sup>.
- iVac is highly instrumental in cases where irrigation depth control is essential<sup>3</sup>, such as young teeth, apexification, regeneration, and apical foramen resorptions.
- The iVac design allows the continuous exchange of ultrasonically activated irrigants with constant refreshment into the root canal system throughout the procedure.
- It can effectively clean and disinfect irregularities of the root canal system with the action of continuous ultrasonic irrigation,<sup>4,5,6</sup>
- The polymer microcannula allows effective ultrasonic activation<sup>7</sup> of the irrigant, even in curved canals.
- The iVac system is simple to install and has an intuitive operation, requiring no significant equipment investment.
- In addition to the ultrasonic vibration, the cannula's external and internal diameters rate significantly reduces the risk of clogging.

3. Use the angled capillary tip attached to a 10cc syringe (not included) filled with the chosen irrigating fluid. Perform irrigation at the pulp chamber level.

## LED Piezo Ultrasonic Scaler

The iVac piezo is a modern and innovative ultrasonic piezoelectric unit designed to meet the demands of both hygienists, dentists, and endodontists with the best possible ultrasonic source performance.

The easy-to-operate touchscreen panel and easy-to-clean design make it a user-friendly option. Not only does the iVac piezo offer the functions of scaler and periodontics, but it also provides a series of inserts for use in endodontics, including exclusive tips for locating canal entries and state-of-the-art irrigation and activation protocol.

Additionally, the iVac exclusively features sets for the iVac negative pressure irrigation and ultrasonic activation system, making it a complete option for irrigation and disinfection of the root canal. This unique function can be achieved from the iVac piezo ultrasonic unit, which has three accessory bottles with an improved dual valve connection that guarantees a perfect fit without leaks. The iVac piezo has a 30-second timer for constant irrigation control and a semi-automatic flush system to ensure the equipment's longevity, even when corrosive irrigating liquids are used.

### EXCLUSIVE FEATURES:

- Less patient sensitiveness and discomfort with the vibration feedback control during scaling
- Water line or reservoir/bootles irrigation sources
- Range of frequency from 25 to 31 kHz
- S-type (Satelec) extensive options of inserts and tips
- Exclusive 3 accessories bottles for fast irrigation fluid replacement during endodontic treatment
- Lightweight LED ergonomic handpiece
- Exclusive 30 seconds continuous irrigation timer
- Semi-automatic flush program to prevent build-ups and corrosion
- Designed and tested for Pac-Dent's unique iVac endodontic irrigation system

### The iVac Piezo plays a vital role in the iVac Irrigation Solution.

Pac-Dent takes immense pride in its comprehensive solution for endodontic irrigation. Our iVac piezo is meticulously designed to seamlessly integrate with the iVac Irrigation, Activation, and Apical Negative Pressure System. We provide a range of expertly formulated medical-grade FDA-approved chemicals for the most effective canal cleaning. Furthermore, we offer multiple delivery options for irrigation fluids during the irrigation phase.

Please see Pg. 89 for details.

## The iVac LED Piezo is the ideal tool to be used in conjunction with the cuttingedge iVac Apical Negative Pressure System.

The iVac Piezo Piezoelectric Ultrasonic Unit is a top-of-the-line tool for endodontics, scaling and periodontal procedures. What sets it apart from other units is its ability to be customized for the iVac irrigation system. The unit comes equipped with a timer and power control functions that have been expertly calibrated to work seamlessly with the iVac system. The iVac Piezo unit has undergone extensive testing in partnership with the iVac system to ensure the safest and most effective experience when cleaning and disinfecting the root canal system.

- 1 Power (amplitude)
- 2 Pre-tuned frequencies for each type of procedure
- 3 Double Touch "E" button for Endo irrigation mode
- 4 Press them simultaneously for system cleaning mode

### 3 Accessory Bottles for Endo irrigation

During the irrigation procedure, you can use the square tank or the convenient accessory bottles to quickly shift irrigants. There is also a pre-set clean-purge program available. An alarm will sound after 30 seconds to indicate the activation/irrigation time. In addition, there is an irrigation mode with pre-set vibration and amplitude that is suitable for activating endodontic irrigants.

### 9542PS iVac LED Piezo Ultrasonic Scaler Kit:

- 1 x Main Unit, Handpiece
- 1 x Flat Wrench
- 1 x AC Cord
- 1 x LED Lamp (extra)
- 1 x Instructions for Use
- 1 x Torque Wrench
- 1 x Foot Pedal
- 1 x Reservoir
- 3 x Accessory Bottles
- 1 x Tech Guide

### Endo Tips Included in the Unit Kit:

- ED12 - Ball Diamond Coated
- ED15 - Spreader
- ED17 - Gutta Percha Cutter

	<b>ED27 - Trumpet</b> Canal Orifice Localization		<b>GD12 - Stain Remover</b>
	<b>ED28 - Scout</b> Canal Orifice Micro-Opening		<b>PD7 - Infra Gingival</b>
	<b>ED70 - Irrigation Connector</b>		<b>PD12 - Interproximal</b>
	<b>ED73 - Peek Polymer Tip</b> .20, 18 mm		
	<b>ED74 - Peek Polymer Tip</b> .20, 21 mm		

### Scaling / Perio Tips Included in the Unit Kit:

- GD04 - Universal Scaling • L
- GD05 - Universal Scaling • M

# 6% Sodium Hypochlorite

## PacEndo Irrigation Tissue Dissolution and Disinfecting Solution

ONE OF THE BEST PRODUCTS OF 2019 AS RATED BY A NON-PROFIT DENTAL RESEARCH ORGANIZATION

Sodium hypochlorite (NaOCl) is undeniably the most commonly used irrigant in the field of endodontics during the instrumentation phase. Its potent antimicrobial effects and ability to dissolve pulpal remnants make it highly recommended for routine clinical use. However, its effectiveness in penetrating the dentin can be hindered due to its surface tension, leading to reduced antibacterial performance within dentinal tubules. Medical-grade FDA approved PacEndo 6% NaOCl has been enhanced with surface active and wetting agents to increase its penetration into the dentin and inaccessible areas of root canals. Thanks to surfactants possessing emulsifying properties, debris can be suspended and removed from the dentin surface, increasing dentin wettability and facilitating instrumentation.

- Used for irrigation and disinfection of root canals during and after instrumentation
- Medical-Grade FDA approved Sodium Hypochlorite without industrial stabilizers
- Controlled formula with tested and ensured concentration for tissue dissolution and antibacterial efficiency

PacEndo Solution Refill	480 ml/16 oz
6% Sodium Hypochlorite with 1 x Luer-Lock Dispensing Cap	PE-SHB

### What are the potential drawbacks of utilizing industrial bleach for endodontic irrigation?

It is imperative to exercise caution when using NaOCl. Mixing household industrial bleach with water is not recommended since the concentration can fluctuate between 2.5% to 6% due to varying storage conditions and time. Unlike medical device predicates like Pacendo NaOCl 6%, household bleach products do not undergo the same level of quality control. Furthermore, industrial NaOCl contains stabilizers that can accumulate on the solenoid valves of ultrasonic units over time, causing damage to the equipment and hindering its functionality.

### Luer-Lock Cap

The luer-lock cap prevents cross-contamination. The syringes can be filled directly from the bottle. It improves solution efficiency and avoids splatter and spills.

# 17% EDTA

## PacEndo Irrigation Chelating Solution

ONE OF THE BEST PRODUCTS OF 2019 AS RATED BY A NON-PROFIT DENTAL RESEARCH ORGANIZATION

PacEndo 17% EDTA is an excellent complement to NaOCl in endodontic cleaning and disinfection phase. While NaOCl has its limitations in dissolving the inorganic components of the smear layer formed during mechanical instrumentation, PacEndo 17% EDTA chelates the calcium ions in dentin, effectively removing the smear layer. This exposure of bacteria residing in the dentinal tubules makes them more susceptible to disinfecting irrigants like Pacendo CHX 2%. Additionally, it allows the endodontic sealer to penetrate the dentinal tubules better, resulting in a superior sealing of the canal.

The research shows 17% EDTA is more effective at smear layer compared to other methods, such as 17% EGTA, 10% citric acid, and MTAD solution.\*

- Prepares dentin walls for better intra-tubular disinfection and sealer penetration
- Enhances the action of subsequent irrigation with Sodium Hypochlorite
- Removes smear layer and dentin mud

SEM After Instrumentation

The evaluation of dentin microhardness after use of 17% EDTA, 17% EGTA, 10% citric acid, MTAD used as chelating agents combined with 2.5% sodium hypochlorite after rotary instrumentation: An in vitro SEM study. Journal of Pharmacy And Bioallied Sciences, 11(6), 156. [https://doi.org/10.4103/jpbs.jpbs\\_282\\_18](https://doi.org/10.4103/jpbs.jpbs_282_18)

# 2% Chlorhexidine

## PacEndo Irrigation Disinfection Solution

ONE OF THE BEST PRODUCTS OF 2019  
AS RATED BY A NON-PROFIT DENTAL  
RESEARCH ORGANIZATION

PacEndo Chlorhexidine is intended to irrigate and cleanse root canal systems after endodontic instrumentation when sodium hypochlorite is not an option. PacEndo 2% Chlorhexidine solution exhibit potent bactericidal properties and possess the exceptional ability to adhere to canal dentin, resulting in a prolonged and effective impact known as substantivity. In contrast to NaOCl, CHX does not trigger any dentin erosion, making it the most favorable and optimal choice for enhancing the antibacterial potential during chemo-mechanical preparation procedures.

It is crucial to note that the reaction between CHX and NaOCl leads to the formation of a dangerous and potentially mutagenic substance called PCA. However, when CHX combines with EDTA, there is no significant production of PCA. It is imperative to avoid the formation of PCA by flushing NaOCl from the canal using EDTA, saline, or distilled water before applying CHX. This step is non-negotiable and should be followed strictly to ensure the safety of the patient.

PacEndo Solution Refill	480 ml/16 oz
2% Chlorhexidine with 1 x Luer-Lock Dispensing Cap	<b>PE-CHXB</b>

# Endo Irrigation Solution

## PacEndo™ 2 in 1 EDTA + Chlorhexidine

PacEndo 2 in 1 EDTA facilitates instrumentation of root canals via a smear layer removal. Chlorhexidine helps to control and kill the bacteria in root canals.

PacEndo Solution Refill	480 ml/16 oz	120 ml/4 oz
2-in-1 EDTA & Chlorhexidine with 1 x Luer-Lock Dispensing Cap	<b>PE-ENC-16</b>	<b>PE-ENC-4</b>

- Easily manage different solutions
- Easy way to organize and identify syringes

**PE-STA** Irrigation Refill Station, 1 Unit

# RC-Prime™

## Root Canal Preparation Lubricant

Compare to Premier® RC-Prep®

RC-Prime is formulated with urea-peroxide 10% and EDTA acid 15% in special water-soluble base to facilitate the engine-driven files action, reducing the friction against the canal walls. RC-Prime chemical action favors the dissolution of organic tissue when used with sodium hypochlorite and also helps in smear layer removal.

It is recommended to use RC-Prime alongside sodium hypochlorite while performing instrumentation. This combination serves as a lubricant and effervescent, facilitating the removal of dentinal particles from the root canal.<sup>1</sup>

### TIPS

In vital pulp cases, it is important to make use of RC-Prep to avoid the formation of collagen plugs while performing instrumentation. These plugs tend to occur when an instrument forces the pulp down into the root canal, causing an obstruction. Handling such blockages can be as difficult as dealing with a blockage caused by a dentinal chip.

# FlexCann™

## Bendable Irrigation Tip

NEW!

Compared to Ultradent NaviTip™, Vista Flexi-Glide™

Pac-Dent's FlexCann tips are 31 ga double side-vented irrigation cannulas to be used during the root canal irrigation phases. The unique angled nozzle design allows correct tip positioning on anterior and posterior teeth without the risk of interrupting irrigant flow by bending the metal part of the cannula. In addition, FlexCann is designed to create the proper shear wear stress on the root canal walls, which is responsible for the mechanical cleaning effect, without the inadvertent expression of the irrigant into periapical tissues. The flexible stainless-steel 31 ga non-tapered cannula safely navigates in curve canals, allowing upward flushing motion.

**Rounded Closed-End**  
prevents wall laceration

**Double-Side Port**  
prevents debris and fluid apical extrusion

**109° Fixed Angled Nozzle**  
allows accurate delivery, while avoiding the bending of the needle and interrupting the flow of irrigant

**31 Ga Size**  
allows deep irrigation even in minimally invasive preparations

# Thermal Obturators

- Calibration rings facilitates setting working length
- Works with your current obturator oven at the same settings
- Easy to get great 3D fills for all canal types
- ISO-sizes system for compatibility

Pac-Dent easy-to-use thermal obturators are available with a plastic carrier (PC) or gutta-percha carrier (GPC). Both are covered with high flowable alpha-phase gutta-percha that provides excellent and precise fillings. The obturators are highly radiopaque and can be used in all the popular heaters. All packs include verifiers which make precise sizing easy.

The GPC obturators have vulcanized compounding gutta-percha carrier designed to make post space preparation easier.

### EASY TO PLACE      EASY TO USE      EASY TO RETREAT

## Accurate Machined Fabricated Gutta-Percha Points

Pac-Dent's Genius Gutta-Percha points utilize a modern proprietary method that eliminates hand-rolling, resulting in a final shape that accurately replicates the instrument's dimensions with a negligible margin of error. Genius Gutta-Percha's unique manufacturing feature ensures perfect adaptation to the canal preparation, particularly in the apical third, and guarantees an airtight seal with the preferred endodontic sealer.

- Manufactured with unparalleled precision using advanced mechanical techniques, guaranteeing accuracy within a shallow ±0.01 mm margin
- No need of calibration cut or trimming
- Compatible with any sealer and technique
- ISO sizes and color coded
- Available in .02, .04 and .06 tapers
- Multiple dimensions are available for different file systems: reciprocation files, multiple and constant taper files.

Three types of Genius Gutta-Percha Points are available, Pac-File constant taper Gutta-Percha Points, Pac-Taper Gutta-Percha Points, and One File Gold progressive taper Gutta-Percha Points.

Pac-Dent has upgraded the manufacturing process for gutta-percha points, resulting in a highly precise product capable of replicating the dimensions of various systems, including the intricate multi-taper design found in modern instrumentation systems.

# iRoot Pro Plus™

## Cordless Endo Motor With Apex Locator

The iRoot Pro Plus is an expertly crafted cordless base and endo motor that operates in continuous or reciprocating motion, showing a compact and ergonomic design. Its built-in apex locator is highly accurate, adding to its exceptional functionality. The iRoot Pro Plus hybrid design provides the best of both worlds, offering the portability of a cordless motor while maintaining the ease of control of a reliable bench motor. With its pre-set programs for Pac-Dent files and other compatibles, the iRoot Pro Plus allows for programming up to eight different file systems for rotation and three for reciprocation. Additionally, this remarkable open endodontic motor offers the unique feature of controlling angles in reciprocation, making it an unparalleled tool in its field.

### EXCLUSIVE FEATURES:

- Cordless lightweight handpiece with built-in accurate apex locator
- Silent (40 to 50dB) brushless motor
- Rotary and reciprocation kinematics with an adjustable range of 10° (20° - 400°)
- Mini 6:1 “slim neck” contra-angle
- Easy to read 3” LCD color display
- Proprietary AutoSense™ technology helps to avoid file separation
- Pre-set files programs in rotary and reciprocation
- 8 customizable programs in rotation and 3 in reciprocation for operator’s choice
- Universal “open” motor works with the majority of rotary and reciprocation engine-driven files
- Speeds between 100 and 1,200 rpm and torque between 0.4 and 4.0Ncm are available
- Convenient sub-settings: auto-start, auto-stop, auto-reverse modes, apical-stop, apical reverse and apical-slow down
- Convenient wireless handpiece charging

#### RPCL02 iRoot Pro Plus Cordless Endo Motor Kit

**Using the appropriate file size is crucial for apex locator measurements. The file should correspond to the anatomic diameter of the canal during the last 3 mm. Thin instruments can make it challenging to obtain an electronic reading and cause inaccurate results due to inadequate control over penetration and false positive readings. Conversely, larger-sized instruments cannot reach the apical third.**

### 360° Rotatable Mini Contra-Angle

The mini contra-angle allows for increased visibility and improved access.

# iRoot Pro Plus™

## Cordless Endo Motor With Apex Locator

### Built-In Apex Locator

The incorporation of an electronic working length determination feature significantly improves the safety of endodontic treatment by constantly displaying the precise location of the file in real-time. This feature also promptly halts or reverses rotation as soon as the file reaches the apical stop, effectively preventing over-instrumentation.

### Accurate Angle Setting in Reciprocation

With the iRoot Pro Plus high-performance open motor, operators can easily adjust the reciprocation angles in 10-degree increments. The motor runs smoothly and quietly, producing minimal vibration, guaranteeing a successful and confident performance. In addition, it is possible to establish a reciprocal program for the rotary file of your choice. However, it is important to make sure that the CW angle value is greater than the CCW angle.

**Here's a guide on how to properly use brushing movements with your files in rotary or reciprocation motions: gently insert the file into the canal and when you feel resistance, withdraw it by 0.5 to 1.0 mm. Without exerting too much pressure, use a lateral brushing motion to flare the canal circumference. Avoid engaging the tip and keep the brushing movement minimal, ensuring the free tip of the file is touching the dentin walls laterally. Do not use the instrument for more than 5 to 10 seconds. The canal will gradually clear, and the file will progress towards the apical area. Apply light pressure only in the final millimeters of the working length.**

### Engine-Driven Instrumentation Kinematics: Reciprocation, Rotation, or Both?

Prioritizing the safety of asymmetric reciprocating movements is crucial to a clinically sound approach to instrumentation. Such movements effectively open up the root canal space and reduce stress until the apical limit is reached, ultimately ensuring optimal results. Finishing off with rotation aids in removing any debris, adding an extra layer of efficiency to the process. The iRoot Pro Plus is a versatile motor that grants complete control over its movement, allowing the operator to customize various parameters. It can rotate in different torque and speed values, with automatic reverse options such as stop, stop and reverse, or the exclusive AutoSense. It also supports reciprocation movement, with the ability to set and save angles in both CW and CCW directions across different programs.

# Pac-Flex™

## Post System

Compared to Flexi-Post\*

1. Tapered Tip: provides a smooth transition between post and root canal
2. Split Shank: redirects insertion stresses towards post instead of the root
3. Sharp Threads: cut into the dentin instead of compressing dentin
4. Venting Channel: avoids hydrostatic pressure during cementation
5. Wider Coronal Shank: increases the intimacy of fit between the post and the wider coronal section of the root canal
6. Serrated Head Design: provides excellent retention of core buildup materials
7. Cross Slots In Post Head: for wrench which fits within the post head diameter to facilitate post placement
8. Post and drills are packaged in color coded blister packs for easy identification, storage, and handling

# INFECTION CONTROL

Air/Water Syringe Tip & Sleeve Combo - Air/Water Syringe Tip - Barrier Sleeves - Face Masks - Disposable Face Shield - Visor And Shield Kit - SoftDry Angle Cotton Roll Substitute - Silicone Napkin Holder - Disposable Traps - Surgical Aspirator Tips - Easy-E-Trap

## Easy One Step Infection Control

One of the best products in 2019 as rated by a non-profit research organization

# ARMOR™

Air / Water Syringe Tip & Sleeve Combo

- A one-step time saver
- Easy infection control
- Reliable and precise delivery
- Non-slip fit

Five Air-Core Design

Armor Air/Water Syringe and Sleeve Combo combines tip and sleeve placement into a single step for fast and easy infection control. The ergonomically designed syringe-tip-sleeve system features a five air-core tip to provide precise and reliable delivery of air/water and a textured sleeve with a non-slip fit that always stays in place.

101-144 Armor A/W Syringe Tip & Sleeve Combo, 144/pk

### Installation Instructions

1. Push the syringe tip into the retainer assembly until fully seated (no groove showing)

2. Point the syringe at the floor & press the air button several times to ensure the tip is properly installed.

3. Slide the sleeve down through the shaft of the syringe until it covers the entire syringe.

### Removal Instructions

2. Press down the retainer button to loosen the tip.

2. Pull the tip straight out of the syringe to remove it.

3. Pull up the sleeve through the shaft of the syringe.

## TruTip™ Plus Colors Air/Water Syringe Tips

Beveled Edges for Patient Comfort

Five Air-Core Design

The Plastic Exterior with Stainless Steel Core Ensures Complete Air/Water Separation

Tip-Lock Groove Secures Tips in the Syringe

- Guaranteed dry air with no moisture contamination
- Interchangeable with most tips with no conversion needed
- Five air-core design for even air flow and increased efficiency
- Secure locking fit
- Stainless steel interior, clear plastic exterior

Disposable air/water syringe tips with plastic exterior and metal interior. They are interchangeable with most metal tips, no conversion necessary. A groove in the tip ensures a snug locking fit so that the tip stays in place throughout the procedure. Does not damage O-Ring.

### Armor™ Phosphor Storage Plate Barrier Envelopes NEW!

Y Notch Design

#### Compared to Air Techniques ScanX® Barrier Envelopes

- Y-notch design reduces cross contamination
- Easy to open with quick sealing technology
- Black opaque material prevents image distortion
- Available in sizes 0, 1, 2, 3, and 4

Armor Barrier Envelopes feature a Y-notch design that ensures the envelope tears open in a single direction to reduce contamination. The extra layer of defense allows Phosphor Storage Plate (PSP) sensors to be easily reused. The black opaque back of the envelope blocks ambient light exposure, preventing image distortion.

i | Visor™ Loupe

# THE MOST COMFORTABLE Reusable Visor and Shield Kit

## iVisor™ Loupe Visor And Shield Kit

- Our most advanced reusable visor and shield kit
- Maximum user comfort with easily adjustable visor and large vents
- Anti-fog coating provides superior optical clarity
- Fits over glasses, loupes, and lights

iVisor Loupe is our most comfortable, reusable visor and shield kit to protect against sprays, splashes, and spatter of body fluids. Designed to eliminate pain, the visor is fully adjustable and features extra wide air vents for maximum airflow. Shields can be reused after contamination by simply washing with warm water and soap or cleaning with a disinfectant solution. Each kit contains 1 visor and 3 barrier face shields. Available in small, medium, and large with a respective rear opening of 8, 9, and 10 cm.

### SoftDry™ Angle Cotton Roll Substitutes

#### Compared to Microcopy NeoDrys™

- Super absorbent: holds 30x its weight in saliva
- Removes easily with water after procedure
- Soft edging and overall flexibility enhances user comfort

SoftDry Angles help to maximize work efficiency and procedure effectiveness by keeping the parotid gland in check for over 15 minutes. Absorbs up to 30x its own weight in saliva or moisture, while providing outstanding cheek protection. It features softer edges that maximize patient comfort and flexible material to accommodate cheek movements.

- SD-268L** ● Blue, Large Adult, 50/pk
- SD-368S** ● Yellow, Small Child, 50/pk

#### Parotid Control Technology (5 layers)

Before

After absorption

### EZ-BibClip™

#### Autoclavable Silicone Bib Holders

Flexible, lightweight, and non-chilling. Features a wider neck band to increase slip resistance and will not snag hair. Provides more comfort compared to traditional bib chains. Length: 18". Medical grade silicone design, fully autoclavable up to 275°F, 100% Latex-Free.

**BUR & ACCESSORIES**

**Endo Access Burs - Crown Preparation Burs - Trimming & Finishing Burs- Crown Cutting Burs - Surgical Burs - FG Carbide Burs - Diamond Burs - HP Diamond Burs - Bur Dispenser**

### Specialty Carbides

Specialty carbides are a critical component to your dental practice and dental laboratory work. Our extensive range of specialty carbides encompass all of the professional needs of your dental practice including everything from trim and finish work to crowns and bridges.

### Endo-Z Safe-End Access Burs

Fitted with an extended, non-cutting, and safe-ended tip, this bur provides easy access to the pulp chamber without penetrating the root canal wall or the pulp chamber floor.

Order #	151Z	152EZ
Diameter	016	016

**152EZ:** Cutting Surface Length: 9 mm, Total Length:21 mm (Compared to Endo-Z™ by Dentsply Maillefer)

Order #	199Z	219EZ
Diameter	016	016

**199Z:** Cutting Surface Length: 10 mm, Total Length:25 mm

**219EZ:** Cutting Surface Length: 10 mm, Total Length:23 mm

### Crown Preparation Burs (Coming Soon)

Pac-Dent crown prep bur cuts quickly and smoothly through enamel without clogging with debris like amalgam, composite, and other restorations during the bulk reduction task in crown preparation. These high performance crown prep burs are comparable to SS White® Great White™ Ultra series. Each package contains 5 pieces.

Order #	CP856-016	CP856-018	CP847-016	CP379-023
Diameter	016	018	016	023

### Trimming & Finishing Burs

Egg ends provide effective contouring and shaping on both posterior occlusal surfaces, and anterior lingual surfaces. Bullet ends are designed for initial shaping of posterior teeth.

Order #	FG7004	FG7006	FG7008	FG7009
Diameter	1.40	1.80	2.30	2.50

Order #	FG7901	FG7902	FG7903

Order #	FG7114
Diameter	0.90

Order #	FG7204	FG7206
Diameter	1.40	1.80

Taper finishing ends are designed for trimming on the cervical portion of any tooth. Straight finishing ends create straight and smooth margins. Inverted taper ends are ideal for establishing a smooth surface on converging walls.

### Crown Cutting Burs

Pac-Dent gold crown cutting burs have greater efficiency on cutting the hardest dental materials including semi-precious metal, amalgam, and composite. PD1 and PD2 are comparable to SS White®'s GW1 and GW2. Each package contains 10 or 100 pieces. Silver burs also available at low price

# WHITENING

In-Office Whitening Kits - Gingival Barrier - LED Whitening Lights - Take-Home Whitening Kits - Tooth Desensitizing Paste

Have you heard of the BIGGEST news in TOOTH WHITENING?

# SHE HAS!

NOW OFFERING THE MOST TECHNOLOGICALLY ADVANCED IN-OFFICE WHITENING GEL ON THE MARKET!

**iBrite®** | ADVANCE TOOTH WHITENING SYSTEM

A unique 30% Hydrogen Peroxide whitening gel formulated for instant activation. Requires no expensive light or syringe-to-syringe mixing.

The formulation combines chemical sensitivity relief (KNO<sub>3</sub>) and fluoride release.

The highly stabilized formula requires no refrigeration, guaranteeing performance and eliminating the need to warm the gel before use.

**1 DUAL-BARREL WHITENING SYSTEM**

**2 NO SENSITIVITY**

**3 NO REFRIGERATION REQUIRED**

## iBrite® 30% HP In-Office Teeth Whitening Kit

Conveniently dispense with a mixing tip

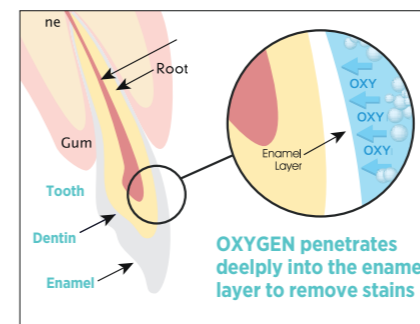

Dual-Barrel design ensures safe and fast activation

- Instant activation
- No refrigeration required
- Ensures patient safety with gingival protection
- Desensitizing additives minimize sensitivity during and after procedure
- Gluten-free

The iBrite 30% HP dual-barrel professional whitening gel delivers outstanding outcomes without the need for refrigeration. The mixed gel maintains a well-balanced pH level and incorporates potassium nitrate and fluoride to effectively reduce sensitivity. The kit includes all the essential items required to perform a complete whitening treatment.

### The Most Technologically Dual-Barrel Whitening System

The dual-barrel system eliminates the hassle of syringe-to-syringe mixing, while the unique proprietary formulation features active calcium ions that promote remineralization.

**An Average Overall Change of 6.30 Shades Was Observed<sup>1</sup>.**

## WHITENING | IN-OFFICE WHITENING KIT

Clinical view of patients showing before and immediate postoperative phase of whitening treatment with iBrite in-office whitening system.

1. Saito, T., Yusuf, A., Syam, S., & Lan, W. (2019). A clinical evaluation of tooth bleaching treatment using a dual-barrel in-office whitening system. *Journal of Case Reports in Dental Medicine*, 1(3), 53-56.

### iBrite 30% Hydrogen Peroxide Gel Stays Very Stable at Room Temperature<sup>2</sup>.

HP Degradation Profiles at RM Temperatures

The whitening gel has been rigorously tested for shelf stability based on ISO-28399 testing standards.

**Gingival Barrier™**  
Barrier Resin

- Light-cured and resin-based
- Provides perfect leakproof gingival protection
- Eliminates the need for a rubber dam

Gingival Barrier is a light-cured, resin-based barrier that protects the gingiva against harm and irritation during whitening treatments. Gingival Barrier is easy to deliver via syringes and needle tips, and is easily removable.

Perfect for protecting gingiva from irritating chemicals such as whitening agents.

**IB-814** Gingival Barrier Resin Kit  
4 x 1.2 mL syringes  
6 x pre-bent needle tips

**iBrite® LED Teeth Whitening System V3**

- 6-10 shades of whiter teeth in less than 1 hour
- Unique color correction function
- Specially designed for dental clinics
- Combines LED polymerization, light activation, and color-correction properties
- State-of-the-art LED technology
- Ergonomic stand design and intuitive controls
- Works well for both gel and powder-liquid based whitening methods

**IB-888** iBrite LED Teeth Whitening System, V3

**iBrite® Portable LED Teeth Whitening System V4**

- 6-10 shades of whiter teeth in less than 1 hour
- Can be operated by patients
- Specially designed for spas and salons
- Offers a wide range of motion
- State-of-the-art LED technology
- Countdown timer is easily visible
- Simple assembly

**IB-688W** iBrite LED Teeth Whitening System, V4

**iBrite® Premium Take-Home Teeth Whitening Kit** NEW!

- 9% Hydrogen Peroxide gel for maximum effectiveness without sensitivity
- Visible results in 4 treatments with 15-minute wear time
- Convenient delivery for easy application
- Viscous gel ensures tray stays securely in place
- Mint flavored
- Gluten-free

iBrite's Premium Teeth Whitening Kit empowers you to attain a bright smile from the comfort of your own home. The professional whitening formula works its magic within 15 minutes. The stable, powerful whitening agents effectively and quickly remove hard-to-dissolve stains. This kit includes 4 whitening treatments and 4 single-use tips.

**321101** iBrite Premium Take-Home Whitening Kit  
4 x 1.2 mL Syringes  
4 x Dispensing Tips  
1 x Mouth Tray  
1 x Shade Guide

**3 Simple Steps for a Brighter Smile**

1. Unscrew the cap from a syringe and screw in the applicator tip. Fill top and bottom of tray with whitening gel.

2. Place the filled tray inside mouth and bite down gently.

3. Wear the tray daily for 15 minutes. Wash the tray with water and store it between uses.

**Kool White® 10%, 15%, and 20%**  
Carbamide Peroxide Office-Assisted  
Take-Home Whitening Kit

10% Carbamide Peroxide

15% Carbamide Peroxide

20% Carbamide Peroxide

- Enhanced formula for extended whitening action
- Unique thickening agent ensures easy application
- Specially formulated for minimal sensitivity
- Guaranteed results in two weeks
- Custom-made application tooth tray
- Mint flavored for long-lasting fresh breath
- Gluten-free

An office-assisted, patient take-home tooth whitening system is expertly designed to eliminate all forms of tooth discoloration caused by factors such as food, tobacco, and other staining agents. This advanced technology has undergone clinical testing, demonstrating its ability to safely and effectively whiten teeth within a two-week timeframe or less.

Kool White offers carbamide peroxide gel in three concentrations: a 10% kit tailed for individuals with sensitive teeth or gums, a 15% kit design for regular users, and a 20% kit ideal for those seeking quicker results, even if they are willing to tolerate minor sensitivity.

**Kool White Take-Home Whitening Kit Contain:**  
9x 1.2 ml Syringes, 1x Resin Spacer, 1x Tray Case, 9x Dispensing Tips, 2x EVA Tray Sheets

- KW-801** Kool White 10% CP
- KW-800** Kool White 15% CP
- KW-805** Kool White 20% CP

**Kool White Take-Home Whitening Refill Kits:**

- KW-802** Kool White 10% CP, 30 x 1.2 ml syringes
- KW-803** Kool White 15% CP, 30 x 1.2 ml syringes
- KW-806** Kool White 20% CP, 30 x 1.2 ml syringes

**iBrite® 6%, 9%, and 12%**  
Hydrogen Peroxide Take Home Teeth  
Whitening Kit

12% Hydrogen Peroxide

9% Hydrogen Peroxide

6% Hydrogen Peroxide

- No need for custom fabricated tooth trays
- Prolonged activation time
- Guaranteed results in two weeks or less
- Dual-barrel gel formulated to reduce hypersensitivity and strengthen teeth enamel
- Gluten-free

Take-home teeth whitening system based on hydrogen peroxide, featuring the innovative iBrite tray, which is silicone-based self-impression tooth tray. Available in three different hydrogen peroxide concentrations (6%, 9% and 12%) to meet various patient needs. The undiluted, purified H<sub>2</sub>O<sub>2</sub> formula works nearly four times faster than traditional carbamide peroxide whitening gels. When used as directed, whitening results can be achieved in just 1-2 weeks.

This iBrite kit is versatile and can be used on its own as a take-home whitening solution or to enhance and maintain the results of in-office chair-side whitening.

**iBrite 6%HP and 9% HP Take-Home Whitening Kit Contain:**  
6 x 1.2 ml Syringes, 1 x iBrite Tray w/Silicone Bite Impression, 6 x Dispensing tips

- IB-806H** iBrite 6% HP
- IB-809H** iBrite 9% HP

**iBrite 12%HP Take-Home kit contain:**  
3 x 4.6 ml Dual-Barrel Syringes, 1 x iBrite Tray w/Silicone Bite Impression, 6 x Dispensing tips

- IB-812HD** iBrite 12% HP

**iBrite Take-Home Whitening Refill Kits:**

- IB-807H** iBrite 6% HP, 30 x 1.2 ml syringes
- IB-815H** iBrite 9% HP, 30 x 1.2 ml syringes
- IB-816H** iBrite 12% HP, 30 x 1.2 ml syringes

**ProMin™ and ProMin™ F**  
Tooth Desensitizing Paste with CPIC

NEW!

- **Rebuilds Beyond the Surface:** Bioactive CPIC supports remineralization of enamel, dentin subsurfaces and tubules-not just the surface
- **Deep Nano-Cluster Penetration:** CPIC's nano-cluster size enables deep penetration and support of the enamel substructure
- **Long-Lasting Sensitivity Relief:** CPIC supports dentinal tubule remineralization for sensitivity relief
- **Suitable for Patients with Reduced Salivary Flow:** ProMin F provides calcium, phosphate, and fluoride to help support enamel mineral balance
- **Clean, Patient-Friendly Formula:** Suitable for both children and adults. Free of milk proteins, gluten, peanuts, sodium lauryl sulfate, and triclosan

ProMin F is a bioactive remineralizing paste that delivers Calcium Phosphate Ion Clusters (CPICs) containing calcium, phosphate, and fluoride to the teeth. It is designed to support enamel and dentin subsurface remineralization and to help reduce tooth sensitivity.

ProMin is a fluoride-free CPIC paste. It is ideal for patients who prefer non-fluoride care while still benefiting from CPIC-driven remineralization.

[Learn more about ProMin F & ProMin and additional applications on page 13!](#)

# X-RAY ACCESSORIES

X-Ray Positioning System - Digital X-Ray Sensor Sheaths & Barrier Envelopes - Disposable Bite Blocks - Mouth Props - X-Ray Film and Sensor Cushions

## EzAim® Defend 3-in-1 NEW! X-Ray Collimator Positioning System

Compared to Dentsply® XCP-ORA®

- Built-in collimator reduces scatter radiation & enhances diagnostics
- 3-in-1 color-coded ring for bitewing, anterior & posterior shots
- Lightweight, compact design—no extra parts needed
- Compatible with all EzAim bite blocks for digital sensors, phosphor plates, & film
- Autoclavable arm and ring

The EzAim Defend 3-in-1 Collimator Positioning System features a compact and lightweight design that eliminates extra parts needed for dental imaging, streamlining the imaging process and protecting patients from excess radiation exposure, adhering to the ALARA (As Low As Reasonably Achievable) standard.

The easily adjustable, color-coded positioning ring allows for quick and accurate alignment, making it ideal for bitewing, anterior, and posterior exposures. Compatible with all EzAim bite blocks, the system works seamlessly with digital sensors, phosphor plates, and traditional film, ensuring adaptability to various clinical setups. Fully autoclavable arm and ring.

Positioning Ring	1/pk

## Armor™ Phosphor Storage Plate Barrier Envelopes

Compared to Air Techniques ScanX® Barrier Envelopes

- Y-notch design reduces cross contamination
- Easy to open with quick sealing technology
- Black opaque material prevents image distortion
- Available in sizes 0, 1, 2, 3, and 4

Armor Barrier Envelopes feature a Y-notch design that ensures the envelope tears open in a single direction to reduce contamination. The extra layer of defense allows Phosphor Storage Plates (PSPs) to be easily reused. The black opaque back of the envelope blocks ambient light exposure, preventing image distortion.

Y Notch Design

X-Ray Barrier Envelope	100/pk
Size 0 side loading barrier envelope, Compares to Air Technique's 73248-0	<b>PPE-732-0</b>
Size 1 side loading barrier envelope, Compares to Air Technique's 73248-1	<b>PPE-732-1</b>
Size 2 side loading barrier envelope, Compares to Air Technique's 73248-2	<b>PPE-732-2</b>
Size 3 side loading barrier envelope, Compares to Air Technique's 73248-3	<b>PPE-732-3</b>

X-Ray Barrier Envelope	50/pk
Size 4 side loading barrier envelope, Compares to Air Technique's 73248-4	<b>PPE-732-4</b>

**ProBlock™**  
Disposable Bite Blocks

The ProBlock is a disposable bite block specifically designed to greatly reduce the potential of cross-contamination between patients when using the panoramic x-ray machine. Each block is individually packaged, and is intended for single patient use only. 100 units per box.

ProBlock	100/pk
Fits Midwest and Ritter Panorol, J. Morita Versaview models	<b>PD-700</b>
Fits Phillips, Den-Tal-Ez Panolite, Soredex	<b>PD-730</b>
Fits Planmeca models	<b>PD-760</b>
Fits Yoshida, Kaycor, Panoura	<b>PD-785</b>
Fits Belmont X-Caliber models	<b>PD-790</b>
Fits Panoramic Corporation	<b>PD-795</b>
Fits Siemens OP 10 models	<b>PD-710</b>
Fits Siemens OP 3 and OP 5 models	<b>PD-720</b>
Fits GE Panolipse and Gendex models	<b>PD-740</b>
Fits Yoshida, Kaycor, Panoura	<b>PD-750</b>
Fits Panorex by Keystone, S.S. White	<b>PD-770</b>
Fits Belmont Autopan FIAD	<b>PD-780</b>

**SoftEdge™ Cushions**  
X-Ray Film and Sensor Cushions

**NEW!**

Compared to Crosstex® Edge-Ease™ Cushions

- Easily and securely adheres to digital sensors, phosphor plates, and film packets
- Create a soft edge for patient comfort
- Optimized thickness allows for greater fit and comfort
- Improves diagnostic results and reduces retakes
- Available in large and small sizes to fit all imaging devices

SoftEdge Cushions features disposable, peel-and-stick adhesive cushions that easily adheres to digital sensors, phosphor plates, and film packets. SoftEdge Cushions create a soft, comfortable edge to protect and safeguard soft tissue from abrasions, while allowing patients to bite harder on the positioning system. Provides technicians with improved diagnostic results due to proper periapical positioning, actively reducing the need for retakes.

SoftEdge Cushions	300/box
Large (Blue) Fits Long Edge of Size 2 Film and Sensors	<b>131301</b>
Small (White) Fits Short Edge of Size 1-2 Film Size and All 0-1 Sensors	<b>131302</b>

**EasyProp™**  
Disposable Mouth Props

Compared to EZ-Prop™

- Firm and non-elastic Styrofoam composition for strength and comfort
- Helps patients hold desired angle for extended procedures
- Integrated hole for easy dental floss threading

**131201** EasyProp, 100/box

**SureHold™**  
Disposable X-Ray Film Holder

Compare to Stabe® and Supa® Film Holders

- Firm and non-elastic Styrofoam composition for strength and comfort
- Holds size #0, #1, or #2 film for both XCP® and BAI techniques for anterior and posterior exposures
- Convenient scored front snaps off for Peds patients

**131202** SureHold, 100/box

**PropBlock™**  
Disposable Bite Blocks

Compare to Dentsply Rinn XCP® Bite Blocks

- Firm and non-elastic Styrofoam composition for strength and comfort
- Holds size #0, #1, or #2 film for XCP® film positioning system
- Convenient scored front snaps off for Peds patients

**131203** PropBlock, 100/box
